Individual Team Member Contributions

Team Member

- Oversaw and allocated team tasks to ensure balanced workload
- Integrated frontend with backend (API linking and data flow)
- Designed and refined several webpages for consistency and usability
- Facilitated communication and progress tracking among team members
- Video recording and editing

Team Member

- Designed responsive and visually consistent frontend webpages.
- Implemented UI styling and form validation for better user experience.
- Assisted with frontend testing, debugging layout issues, and refining design alignment
- Supported documentation of frontend components and design standards.

Team Member

- Produced key system diagrams (use-case, sequence, BCE) to guide development
- Mapped requirements to code implementation to ensure design accuracy
- Rendered support to both frontend and backend where needed.
- Contributed to documentation and presentation materials

Team Member

- Headed backend development, including API routes, CRUD operations, and database schema design
- Implemented authentication, data seeding, and debugging of integration issues
- Conducted backend testing and assisted in deployment setup

- Collaborated closely on frontend–backend integration and technical documentation

Roshitha

- Designed detailed test cases and managed testing process using a TDD approach
- Authored reports on CI/CD pipeline, test results, data driven development, and ethical considerations
- Supported backend where needed
- Contributed to documentation and report compilation

Team Member

- Designed multiple frontend webpages with attention to layout, accessibility, and responsiveness
- Developed interactive UI components (buttons, modals, filters) and refined page styling
- Assisted with debugging, frontend testing, and visual alignment during integration
- Contributed screenshots and UI documentation for the final report

List of User Stories

This report frames the system requirements through user stories derived from the four primary actors/profiles identified:

User Admin, CSR Representative, Person-in-Need (PIN), and Platform Management.

User Admin

Taiga ID	User Stories	Sprint Number
#1	As a User Admin , I want to create user account(s) so that new users are able to access the system .	0
#2	As a User Admin , I want to view user account(s) so that I can review and verify user account details .	1
#3	As a User Admin , I want to update user account(s) so that all user account details remain current and accurate .	1
#4	As a User Admin , I want to suspend user account(s) so that unauthorized or invalid users are prevented from accessing the system .	1
#5	As a User Admin , I want to search user account(s) so that I can accurately identify and manage the relevant user account(s) .	1

#6	As a User Admin , I want to create user profile(s) so that user accounts can be assigned a role upon registration.	0
#7	As a User Admin , I want to view user profile(s) so that I can review and verify the different types of user profiles.	1
#8	As a User Admin , I want to update user profile(s) so that all user profile information remains current and accurate.	1
#9	As a User Admin , I want to suspend user profile(s) so that I can prevent users with that role from exercising its permissions.	1
#10	As a User Admin , I want to search user profile(s) so that I can accurately identify and manage all relevant user profiles.	1
#11	As a User Admin , I want to log in so that I can access the user admin privileges.	0
#12	As a User Admin , I want to log out so that I can ensure my account remains secure when not in use.	0

CSR Representative

Taiga ID	User Stories	Sprint Number
#13	As a CSR Representative , I want to search for requests made by PIN's so that I can identify opportunities relevant to volunteers.	3
#14	As a CSR Representative , I want to view requests made by PIN's so that I can review the details of their requests before making decisions.	3
#15	As a CSR Representative , I want to save certain requests into a shortlist so that I can manage and revisit potential opportunities.	3
#16	As a CSR Representative , I want to search my shortlisted requests so that I can easily locate specific opportunities that I have shortlisted.	3
#17	As a CSR Representative , I want to view my shortlisted requests so that I can evaluate and prioritize follow-up actions.	3
#18	As a CSR Representative , I want to search my history of completed matches so that I can view a specific match.	3
#19	As a CSR Representative , I want to view the history of completed	3

	matches so that I can view the details of completed matches .	
#20	As a CSR Representative , I want to log in so that I can securely access the system .	3
#21	As a CSR Representative , I want to log out so that I can ensure my account remains secure when not in use .	3

Person-In-Need (PIN)

Taiga ID	User Stories	Sprint Number
#22	As a PIN , I want to create service requests so that I can seek assistance for my needs .	2
#23	As a PIN , I want to search my service requests so that I can locate a specific request efficiently .	2
#24	As a PIN , I want to view the details of my service requests so that I can review their status and information .	2
#25	As a PIN , I want to update my service requests so that information remains accurate and current .	2
#26	As a PIN , I want to delete (or cancel) a service request so that outdated or resolved requests are removed from the system .	2
#27	As a PIN , I want to see the number of views for my request so that I can understand the level of interest and visibility my request has received .	3
#28	As a PIN , I want to see the number of times my request was shortlisted so that I can gauge genuine volunteer interest and anticipate the likelihood of receiving support .	3

#29	As a PIN , I want to search my history of completed matches so that I can find and review details of a specific match when needed.	3
#30	As a PIN , I want to view the history of completed matches so that I can review the details of past support for reference, follow-up or record-keeping.	3
#31	As a PIN , I want to log in so that I can securely access my account and manage my requests.	2
#32	As a PIN , I want to log out so that I can ensure my account remains secure when not in use.	2

Platform Management

Taiga ID	User Stories	Sprint Number
#33	As a Platform Management , I want to create categories so that I can efficiently manage and organize the different types of support services available.	2
#34	As a Platform Management , I want to view categories so that I can see what types of support already exists and avoid creating duplicates.	2
#35	As a Platform Management , I want to update existing categories so that I can keep information accurate and up to date when service names, descriptions, or requirements change.	2
#36	As a Platform Management , I want to delete (archive) categories so that I can remove outdated, duplicate, or irrelevant categories and keep the platform organized and accurate.	2
#37	As a Platform Management , I want to search categories so that I can quickly locate and manage a particular category with ease.	2

#38	As a Platform Management , I want to log in so that I can securely access the system.	2
#39	As a Platform Management , I want to log out so that I can ensure my account remains secure when not in use.	2
#40	As a Platform Management , I want to create daily reports so that I can monitor the platform's day-to-day activities, identify any immediate issues.	3
#41	As a Platform Management , I want to create weekly reports so that I can review overall platform performance, measure weekly progress, and assess short-term goals or workload distribution.	3
#42	As a Platform Management , I want to create monthly daily reports so that I can analyse long-term trends, evaluate the impact of services, and prepare data for reviews or strategic planning.	3

CSIT314 – Sparkling Fuji Apple

Sprint 0

Sprint 0 Duration: 6th October 2025 – 10th October 2025

Location: Online call (Discord)

Date: 6th October 2025 (06/10/2025)

Time: 10:00AM – 10:30AM

Attendance: 6/6

Name	UOW ID
Team Member	<REDACTED>
Team Member	<REDACTED>
Team Member	<REDACTED>
Team Member	<REDACTED>
Roshitha	<REDACTED>
Team Member	<REDACTED>

Agenda items

1. **Initiate Sprint 0** to establish the foundational setup and development structure for the project.
2. **Develop two sample code snippets** following the **Boundary–Control–Entity (BCE)** architecture, and **draft their corresponding diagrams** — including **Class, Entity, BCE, and Sequence Diagrams** — to illustrate system interactions.

3. **Allocate roles and manpower** across the team to define responsibilities for frontend, backend, and documentation tasks.
4. **Finalize the selection of frontend and backend frameworks** to ensure consistency and compatibility throughout the project's development phase.

Discussion / Key Points from Meeting

- **Two User Stories selected for sample code development**

1. "As a User Admin, I want to create user account(s) so that new users are able to access the system."
2. "As a User Admin, I want to create user profile(s) so that user accounts can be assigned a role upon registration."

[Additional Task]

3. "As a User Admin, I want to log in so that I can access the user admin privileges."
4. "As a User Admin, I want to log out so that I can ensure my account remains secure when not in use."

- **Role allocation**

- **Frontend:** Abdul Aziz Bin Adil, Darryn Wan Jing Kai, Malcolm Loh Shun Jie
- **Backend:** Lee Looi Yen, Gunasekaran Roshitha
- **Use-Case Diagram:** Kayne Juro Chandra
- **Test-Cases:** Gunasekaran Roshitha

- **Frontend Framework**

- a. **HTML** – Page structure and forms
- b. **CSS** – Styling

c. **JavaScript** – Light validation and interactivity

- **Backend Framework**

a. **ExpressJS** – Lightweight API server

b. **Drizzle ORM (PostgreSQL)** – Lightweight database toolkit

Class Diagram

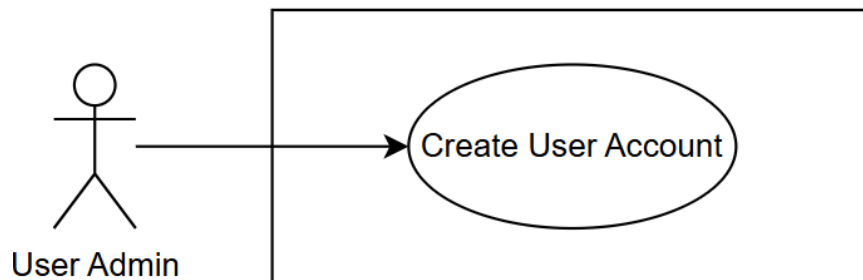

Entity Relational Diagram

1. User Admin - Create User Account

As a User Admin, I want to create user account(s) so that new users are able to access the system.

Use Case Diagram Taiga ID# 01

Use Case Description Taiga ID# 01

Name: User Admin - Create User Account

Stakeholders and goals:

User Admin – wants to create accounts to allow new users to log in.

Description:

The User Admin fills in the required user information to create a User Account: **`Full Name`, `Login ID`, `Email`, `Password`, `Phone Number`, `Address`, `Date of Birth` and `User Profile`**.

Once the account is created, the user can then log in using their credentials to access the system based on their user profile.

Actors: User Admin

Pre-condition(s): User Admin is logged in.

Trigger: User Admin decides to create a new user account

Normal flow:

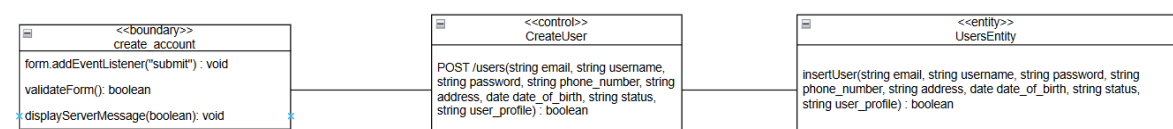

1. User Admin navigate to “Create User Accounts” page
2. User Admin fills in the required user account information:
 - Full Name *
 - Login ID *
 - Email *
 - Password *
 - Phone Number *
 - Address *
 - Date of Birth *
 - User Profile *
2. User Admin submits the form.
3. System validates input (checks for missing fields, adherence to format etc.)
4. System saves the user account and confirms creation.
5. System would display “Account Created Successfully”

Sub-flows: None

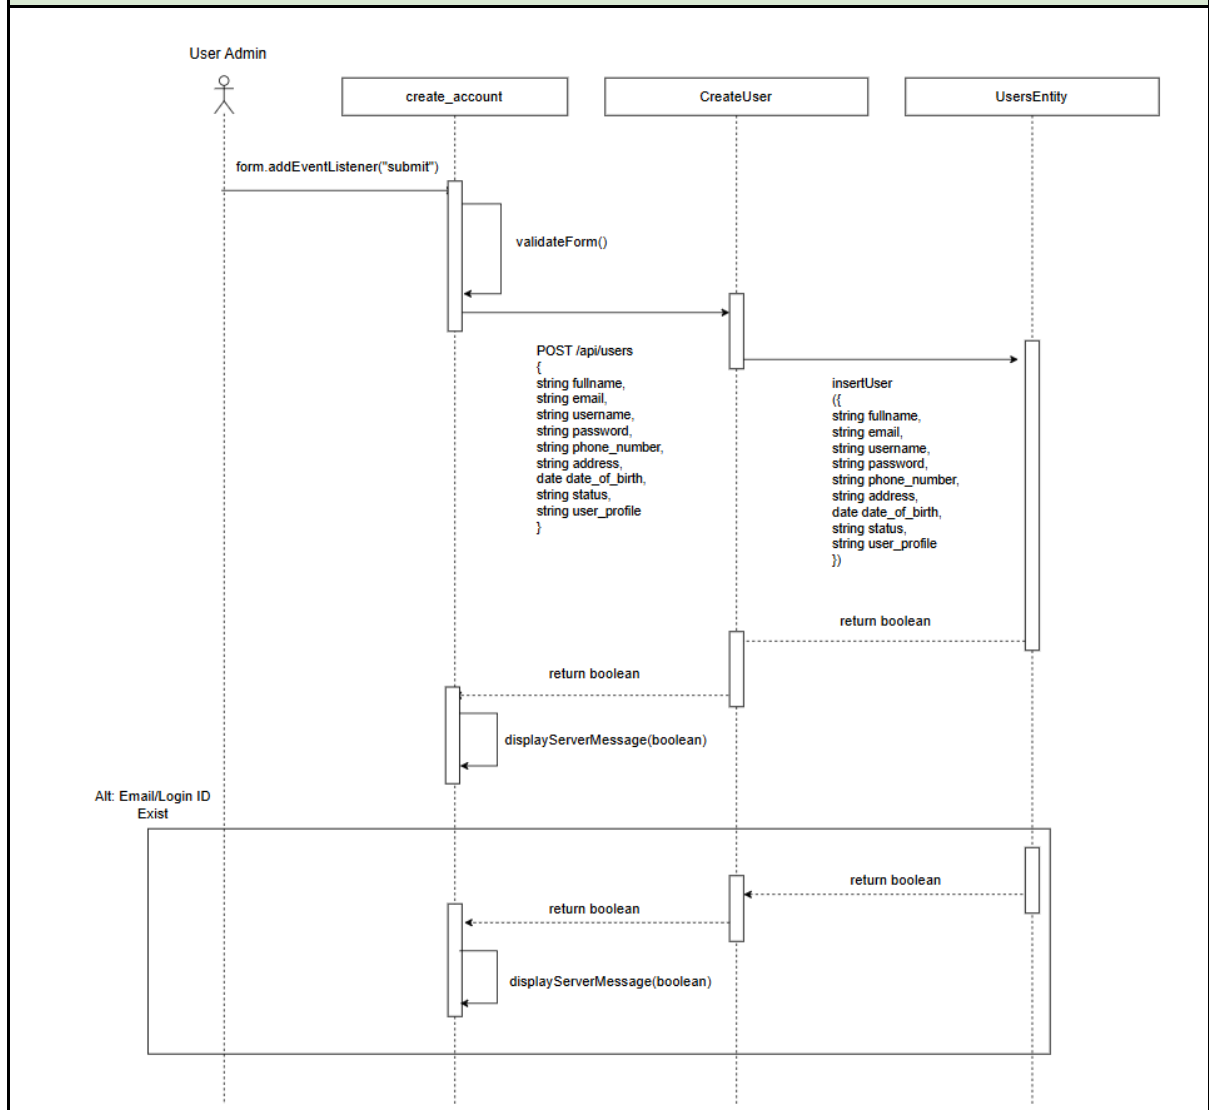

Alternative/Exceptional Flows:

3a. [Alternate Email / Login ID exists]: System displays an error

BCE Diagram Taiga ID# 01

Sequence Diagram Taiga ID# 01

User Registration

Create an account to request help, represent users, or volunteer.

Full Name *

e.g., Jane Doe

Required. Up to 64 characters.

Login ID *

e.g., janedoe123

Required. 3–32 chars: letters, numbers, dot, underscore, hyphen.

Email *

you@example.com

Required.

Password *

At least 8 characters

Required. Password should be at least 8 characters.

Phone Number *

8123 4567

Required. 8 digits

Address *

Block/Street, Unit, Postal Code

Required. Up to 255 characters.

Date of Birth *

dd/mm/yyyy

Required.

User Profile *

Select a profile...

Required. Select a role.

Create Account

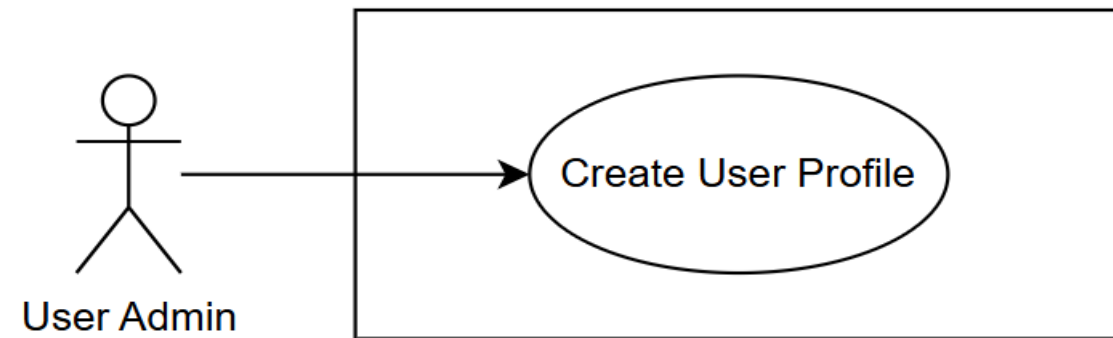

Clear

Return to Dashboard

6. User Admin - Create User Profile

As a User Admin, I want to create user profile(s) so that user accounts can be assigned a role upon registration.

Use Case Diagram Taiga ID# 06

Use Case Description Taiga ID# 06

Name: User Admin - Create User Profile

Stakeholders and goals:

User Admin – wants to create user profiles so that user accounts can be assigned a role upon registration.

Description:

The User Admin fills in the required information to create a User Profile:

`Name`, `Description`, `Others`.

Once a User Profile is created, users can log in to access the system based on their user profile. It can also be assigned upon creating a new user account.

Actors: User Admin

Pre-condition(s): User Admin is logged in

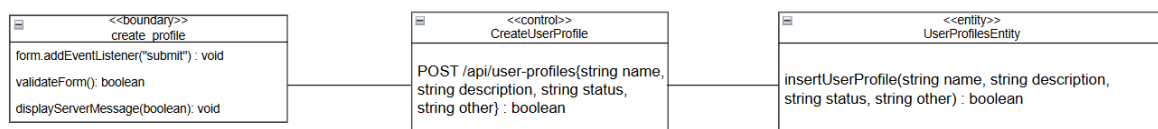

Trigger: User Admin decides to create a new user profile

Normal flow:

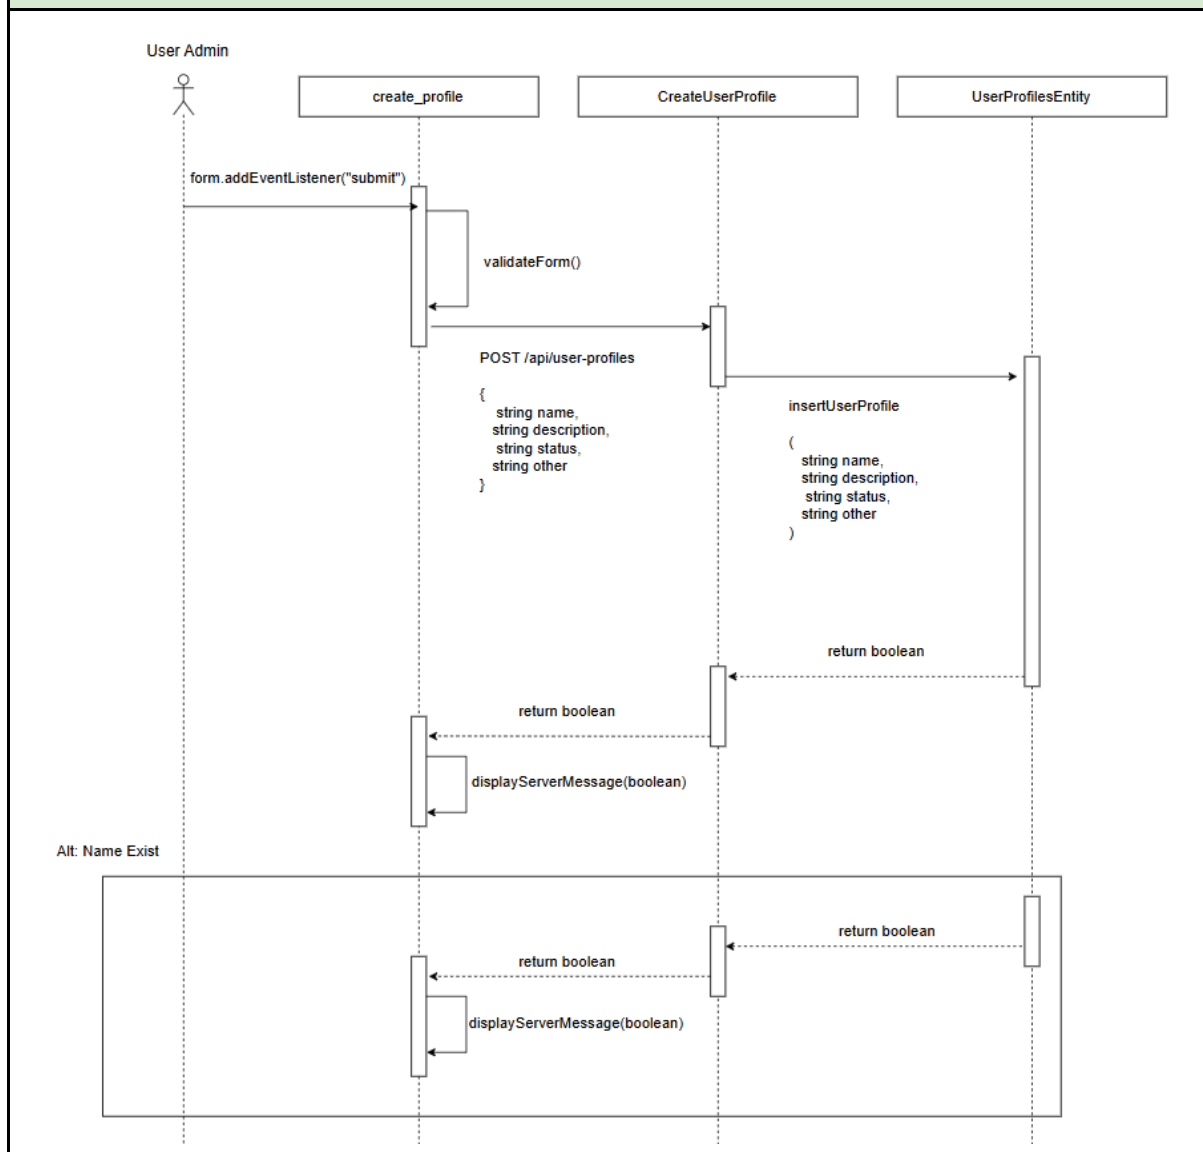

1. User Admin navigate to “Create User Profiles” page
2. User Admin fills in the required user profile information:
 - Name*
 - Description
 - Others
3. User Admin submits the form.
4. System validates input (checks for missing fields – **name***)
5. The new user profile is created
6. System would display “Profile created successfully.”

Sub-flows: None**Alternative/Exceptional Flows:**

3a. [Alternate Name exists]: System displays an error.

BCE Diagram Taiga ID# 06

Sequence Diagram Taiga ID# 06

Create User Profile

Fill in the details below to add a new profile or role.

Name *

e.g., User Admin, CSR Representative, Person In Need, Platform Management

Required. 1–64 characters.

Description

Optional. Short description of this role's responsibilities.

Optional. Up to 255 characters.

Other

Optional. Notes or additional details.

Examples: "Emergency Contact", "Case Manager", "Senior Volunteer".

Submit

Clear

11. User Admin – Log In

As a User Admin, I want to log in so that I can access the user admin privileges.

Use Case Diagram Taiga ID# 11

Use Case Description Taiga ID# 11

Name: User Admin – Log in

Stakeholders and goals:

User Admin – wants to access their account to perform administrative tasks.

Description:

This allows the User Admin to log in to the website by providing their credentials: Login ID / Email and Password, allowing the User Admin to authenticate and gain access to the system's protected features.

Actors: User Admin

Pre-condition(s):

- User Admin has a valid user account.
- User Admin Account / Profile is not Suspended.

Trigger: User Admin decides to log in.

Normal flow:

1. User Admin enters (Login ID / Email) + Password.
2. User Admin submits the form.

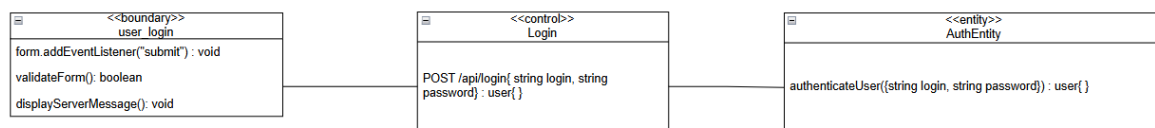

3. System validates login credentials.
4. System authenticates and authorizes, redirecting to Admin Dashboard.

Sub-flows: None

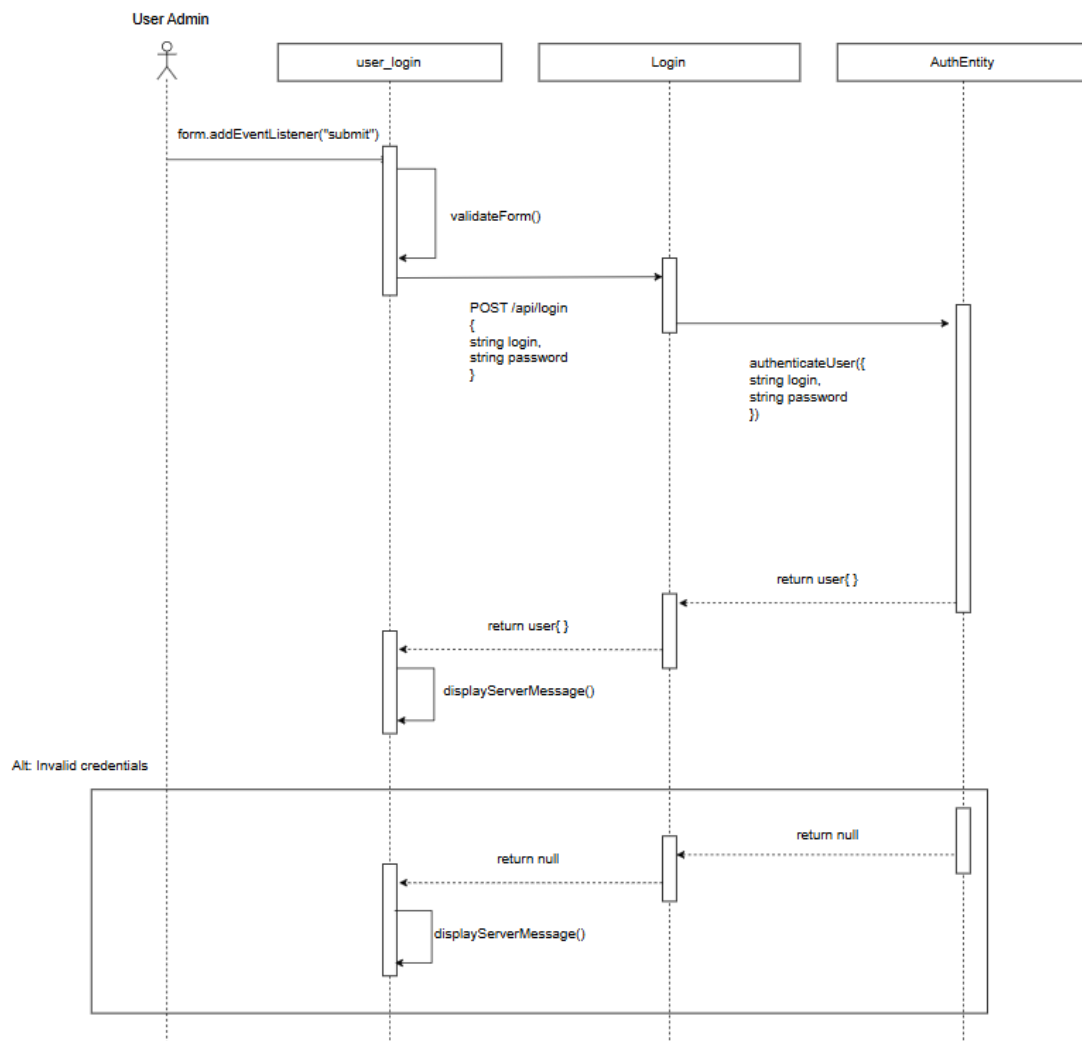

Alternative/Exceptional Flows:

3a. [Invalid Credentials]: System displays error message.

12. User Admin – Log Out

As a User Admin, I want to log out so that I can ensure my account remains secure when not in use.

Use Case Diagram Taiga ID# 12

Use Case Description Taiga ID# 12

Name: User Admin – Log out

Stakeholders and goals:

User Admin – wants to log out securely to prevent unauthorized

Description:

This allows the User Admin to securely end their active session in the system. When the User Admin selects the “Log out” function, the system terminates the current session and returns the user to the login screen or home page, preventing further access until they log in again.

Actors: User Admin

Pre-condition(s): User Admin is logged in.

Trigger: User Admin decides to log out.

Normal flow:

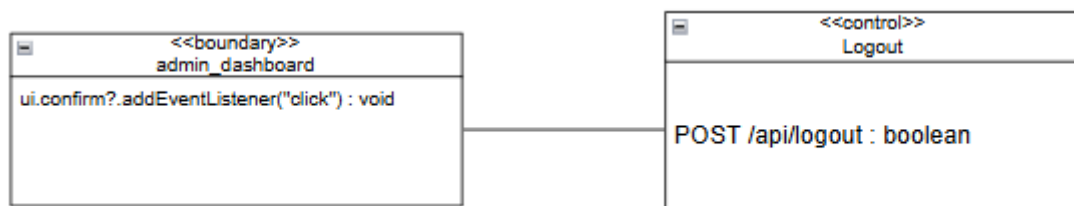

1. User Admin clicks on the “Log out” button.
2. The system prompts a confirmation if the User Admin would like to log out.

3. The system terminates the current session.
4. System redirects the User Admin to the Login page.

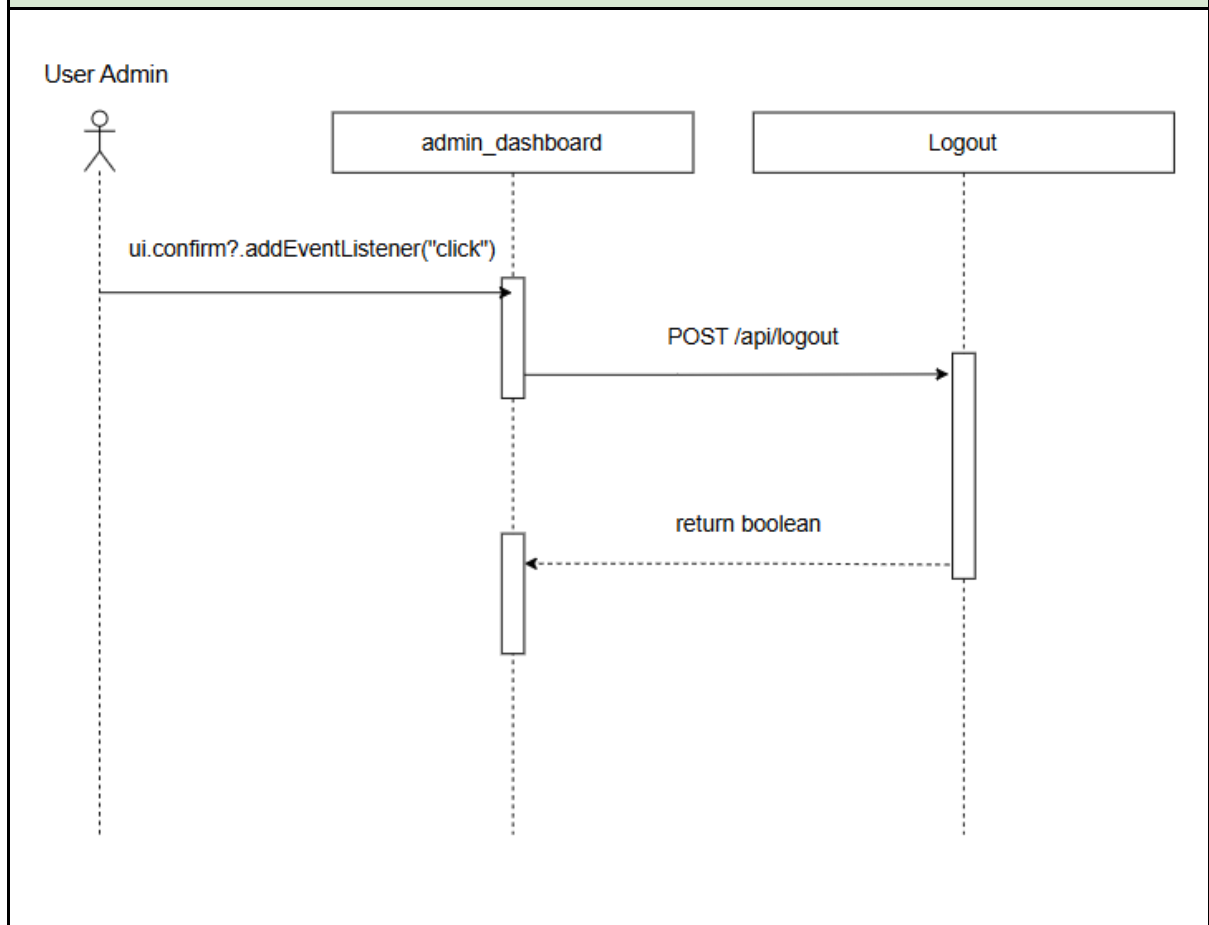

Sub-flows: None

Alternative/Exceptional Flows: None

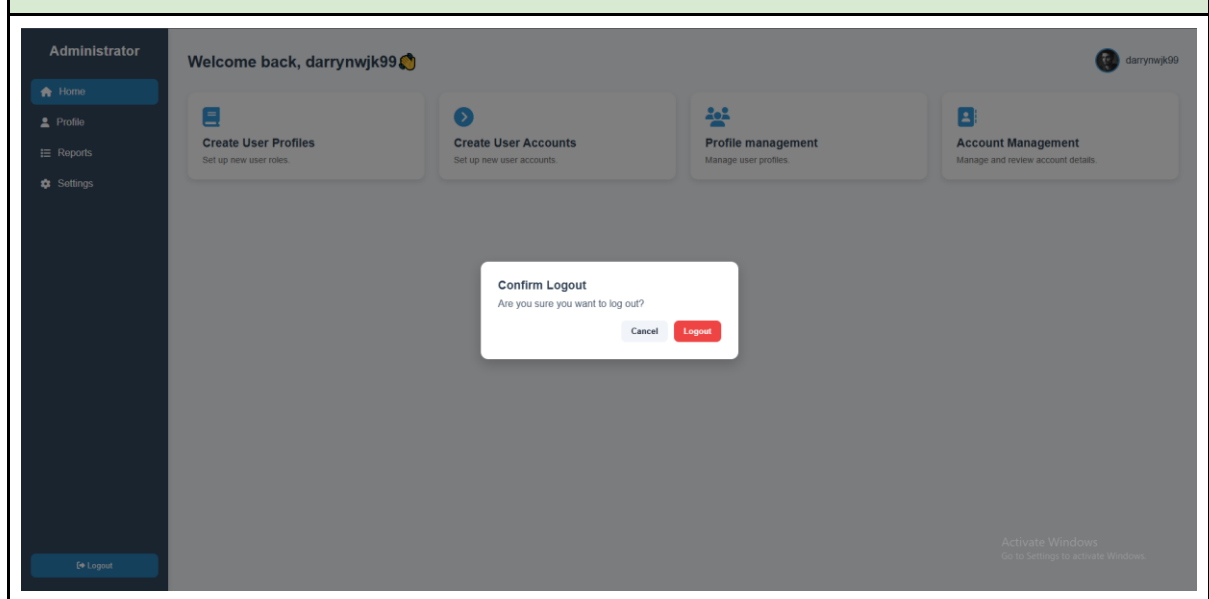

BCE Diagram Taiga ID# 12

Sequence Diagram Taiga ID# 12

Wireframe Taiga ID# 12

End of Sprint 0

End of Sprint Summary:

- Initiated Sprint 0 successfully to establish the project foundation.
- Created two sample code-snippets following the Boundary-Control-Entity (BCE) architecture pattern as development references.
- Completed role and manpower allocation for both frontend and backend teams.
- Finalized the selection of frontend and backend frameworks to ensure consistent technology alignment across the project.

Next Sprint Focus:

- Complete remaining User Admin user stories (#2, #3, #4, #5, #7, #8, #9, #10).
- Develop BCE and Sequence Diagrams for the remaining user stories.
- Continue and review where needed, manpower allocations for designing frontend webpages and backend APIs.

Test Cases for Sprint 0

Test Case ID	UA-1-1
Test Case Description	Creating a new account as an User Admin.
Precondition	User Admin needs to be logged in with an existing user profile.
Created by	Roshitha
Test Steps	1. Open the 'Admin Dashboard' page 2. Click 'Create User Accounts' 3. Fill all required fields 4. Click 'Register'
Test Data	Username: JohnLim Role: User Admin Password: JohnLim Login ID: JohnLim Email: John_Lim@CSR.com Phone Number: +65 81517695 Date of Birth: 19-09-1999
Expected Results	The account is created successfully and the system would display 'Account Created Successfully'.
Actual Results	The account is created successfully and the system would display 'Account Created Successfully'.
Pass/Fail	Pass
Remarks	Acknowledged with "Account created successfully"

Test Case ID	UA-1-2
Test Case Description	Creating a duplicate account as an User Admin.
Precondition	User Admin needs to be logged in with an existing user account(s) and profile(s).
Created by	Roshitha
Test Steps	1. Open the 'Admin Dashboard' page 2. Click 'Create User Accounts' 3. Fill all required fields 4. Click 'Register'
Test Data	Username: JohnLim Role: User Admin Password: JohnLim Login ID: JohnLim Email: John_Lim@CSR.com Phone Number: +65 81517695 Date of Birth: 19-09-1999

Expected Results	The system prevents the admin from creating the account.
Actual Results	The system prevents the admin from creating the account.
Pass/Fail	Pass
Remarks	Cannot register duplicate account/user

Test Case ID	UA-2-1
Test Case Description	Creating a new profile as an User Admin.
Precondition	User Admin needs to be logged in.
Created by	Roshitha
Test Steps	1. Open the 'Admin Dashboard' page and click 'Add User Profile' 2. Fill all required fields 3. Click 'Register'
Test Data	Name: Transportation Admin Description: Testing Others: Testing
Expected Results	The system successfully creates the user profile and displays an acknowledgment message confirming the action.
Actual Results	The system successfully creates the user profile and displays an acknowledgment message confirming the action.
Pass/Fail	Pass
Remarks	Unique profile created successfully with acknowledgment.

Test Case ID	UA-2-2
Test Case Description	Creating a duplicate profile as an User Admin.
Precondition	The User Admin account should already be created and available in the system.
Created by	Roshitha
Test Steps	1. Open the 'Admin Dashboard' page 2. Click 'Create User Profiles' 3. Fill all required fields 4. Click 'Register'
Test Data	Name: Transportation Admin Description: Testing Others: Testing
Expected Results	The system prevents the admin from creating the profile.

Actual Results	The system prevents the admin from creating the profile.
Pass/Fail	Pass
Remarks	Duplicate profiles cannot be created.

Test Case ID	UA-3-1
Test Case Description	User Admin Logs In
Created by	Roshitha
Precondition	The User Admin account should already be created and available in the system.
Test Steps	1. Fill in details in 'Login' page 2. Logs you in 3. 'Admin Dashboard' displays
Test Data	Username/Login ID: OliviaBennett Password: OliviaBennett
Expected Results	The system successfully authenticates the user and redirects to the 'User Admin Dashboard'.
Actual Results	The system successfully authenticates the user and redirects to the 'User Admin Dashboard'.
Pass/Fail	Pass
Remarks	User Admin is logged in and redirected to the User Admin dashboard

Test Case ID	UA-3-2
Test Case Description	User Admin fails to log in.
Created by	Roshitha
Precondition	The User Admin account should already have been created.
Test Steps	1. Fill in wrong password in 'Login' page 2. Fails to log you in
Test Data	Username/Login ID: OliviaBennett Password: OliviaBe3
Expected Results	The system prevents login as a result of invalid credentials.
Actual Results	The system prevents login as a result of invalid credentials.
Pass/Fail	Pass
Remarks	The system correctly prevents login due to invalid credentials.

Test Case ID	UA-4
Test Case Description	User Admin Logs Out
Precondition	User Admin needs to be logged in.
Created by:	Roshitha
Test Steps	1. Click 'Log Out' Button 2. Prompts confirmation 3. Click 'Confirm' to log out
Test Data	-
Expected Results	The user is logged out and redirected to the 'Login page' and terminates the current session.
Actual Results	The user is logged out and redirected to the 'Login page' and terminates the current session.
Pass/Fail	Pass
Remarks	User admin is logged out and redirected back to the login page.

Agenda items

1. **Complete development and refinement** of the remaining **User Admin user stories** (#2, #3, #4, #5, #7, #8, #9, and #10).
2. **Develop and finalize** the corresponding **Boundary–Control–Entity (BCE)** and **Sequence Diagrams** for the remaining user stories to ensure clear system design documentation.
3. **Allocate manpower and responsibilities** for the **frontend webpage design** and **backend API development** to support parallel implementation efforts.

2. User Admin - View User Account

As a User Admin, I want to view user account(s) so that I can review and verify user account details.

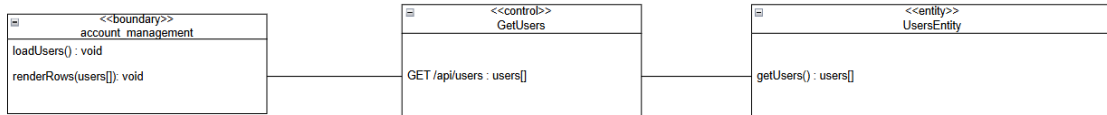

Use Case Description Taiga ID# 02
Name: User Admin - View User Account
Stakeholders and goals: User Admin – wants to view all user accounts to review and verify account details.
Description: The User Admin accesses the list of existing user accounts to review and verify their details. The system displays all user accounts with relevant information such as: `Full Name`, `Username`, `Email`, `Password`, `Phone Number`, `Address`, `Date of Birth`, `User Profile`, `Status` (ACTIVE SUSPENDED), ...
Actors: User Admin
Pre-condition(s): User Admin is logged in.
Trigger: User Admin decides to view all user account(s).
Normal flow: 1. User Admin navigate to “Account Management” page 2. System displays a list of existing user accounts and the relevant information.

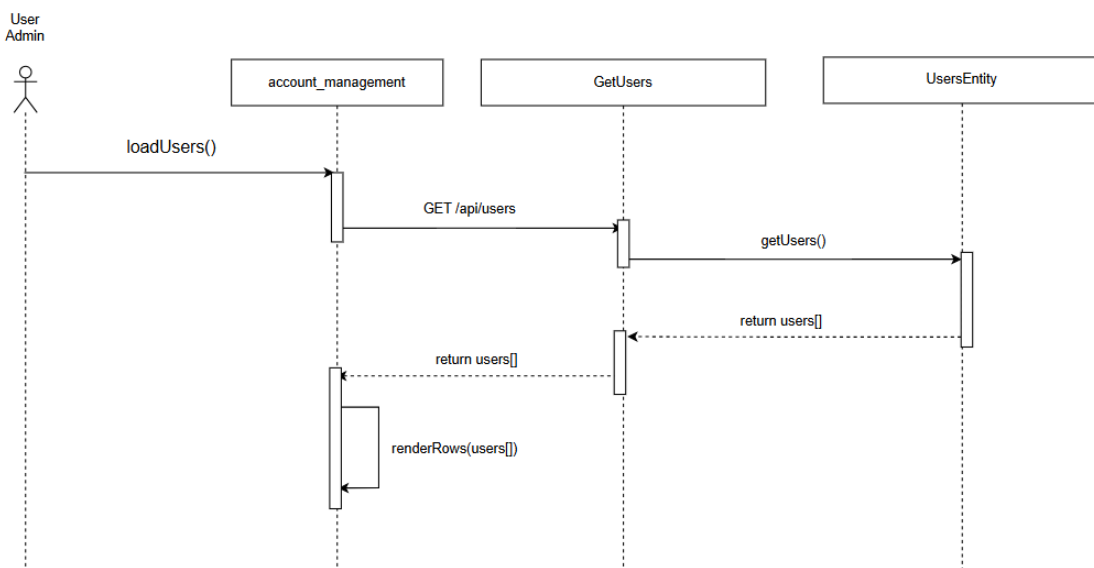

Sub-flows: None

Alternative/Exceptional Flows: None

3. User Admin – Update User Account

As a User Admin, I want to update user account(s) so that all user account details

Use Case Diagram Taiga ID# 03

remain current and accurate.

Use Case Description Taiga ID# 03

Name: User Admin – Update User Account

Stakeholders and goals:

User Admin – wants to update user accounts to ensure user account details remain current and accurate.

Description:

The User Admin selects an existing user account and updates one or more fields such as:

`Full Name`, `Username`, `Email`, `Password`, `Phone Number`, `Address`, `Date of Birth` and `User Profile`.

After submitting the changes, the system validates the input and updates the user account record. The selected row is flashed green for visual confirmation and updated information is then reflected in the system for future use.

Actors: User Admin

Pre-condition(s):

- User Admin is logged in.
- User Admin navigate to “Account Management” page

Trigger: User Admin decides to update a user account.

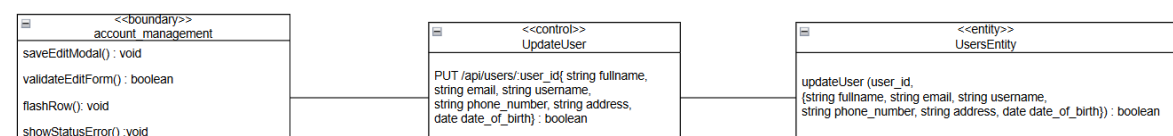

Normal flow:

1. User Admin clicks on “Edit” on the selected row.
2. The User Admin can update the following field
 - Full Name*
 - Username*
 - Email*
 - Phone Number*
 - Address*
 - Date of Birth*
 - User Profile*
3. User Admin submits the updated information.
4. System validates the input (checks for missing fields, data format etc).
5. System saves the updated details, updates the table and briefly highlights the affected row green for visual confirmation of successful update.

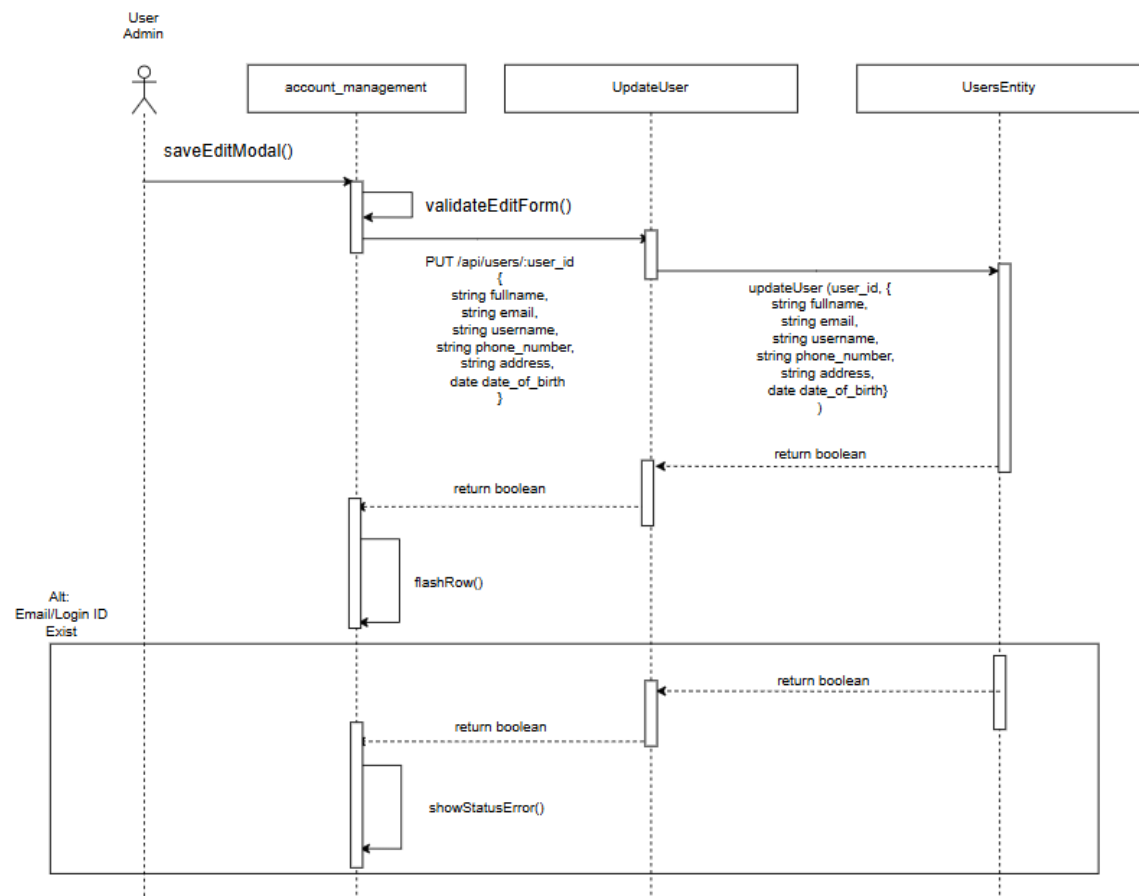

Sub-flows: None

Alternative/Exceptional Flows:

2a. [Duplicate Email or Login ID detected] – System displays an error message.

4. User Admin – Suspend User Account

As a User Admin, I want to suspend user account(s) so that unauthorized or invalid users are prevented from accessing the system.

Use Case Diagram Taiga ID# 04

Use Case Description Taiga ID# 04

Name: User Admin – Suspend User Account

Stakeholders and goals:

User Admin – wants to suspend user account(s) so that unauthorized or invalid users are prevented from accessing the system.

Description:

The User Admin reviews the list of user accounts and selects an account to suspend. Once the suspension is confirmed, the selected row flashes green for visual confirmation, updates the status badge and the system updates the account status to “*Suspended*”, preventing the affected users from logging in or accessing any system features tied to their account.

Actors: User Admin

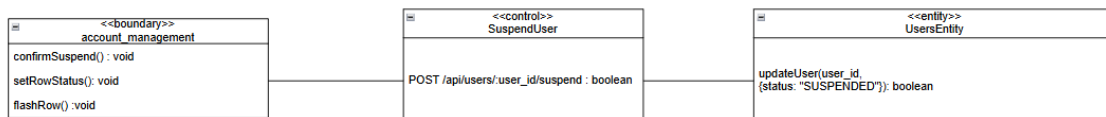

Pre-condition(s):

- User Admin is logged in.
- User Admin navigate to “Account Management” page

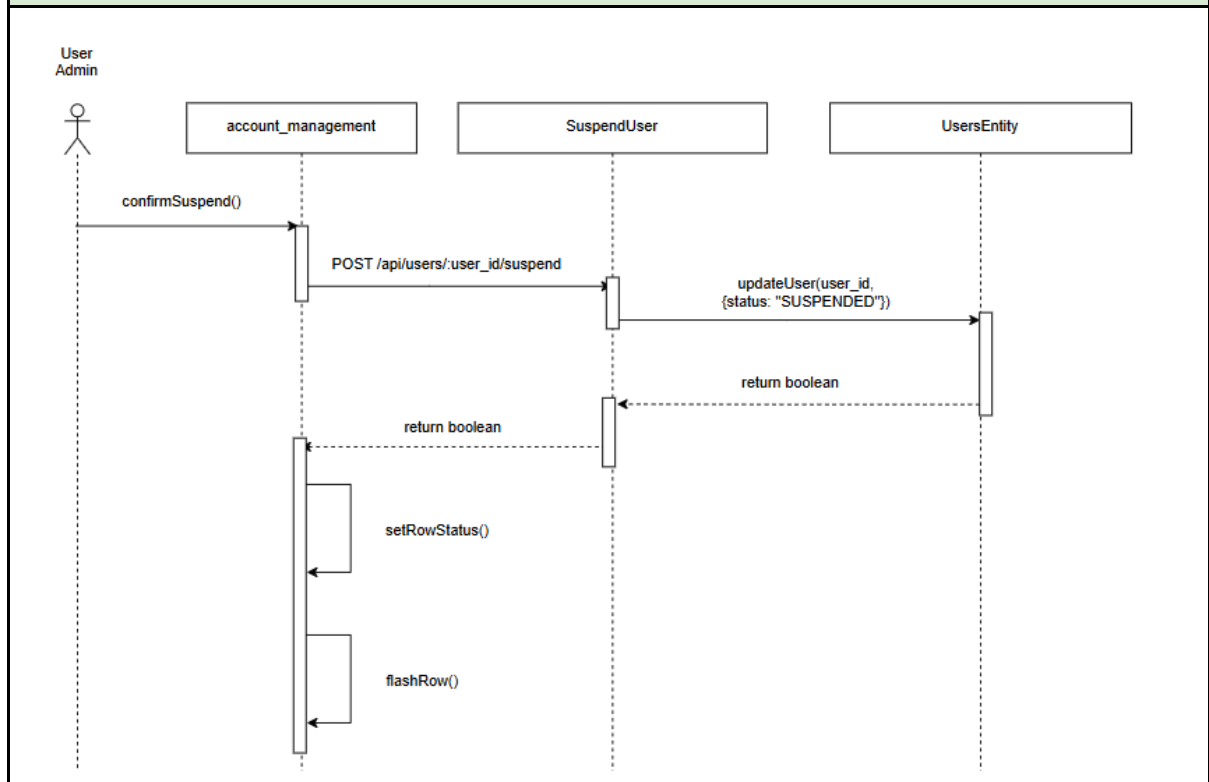

Trigger: User Admin wants to suspend a specific user account.

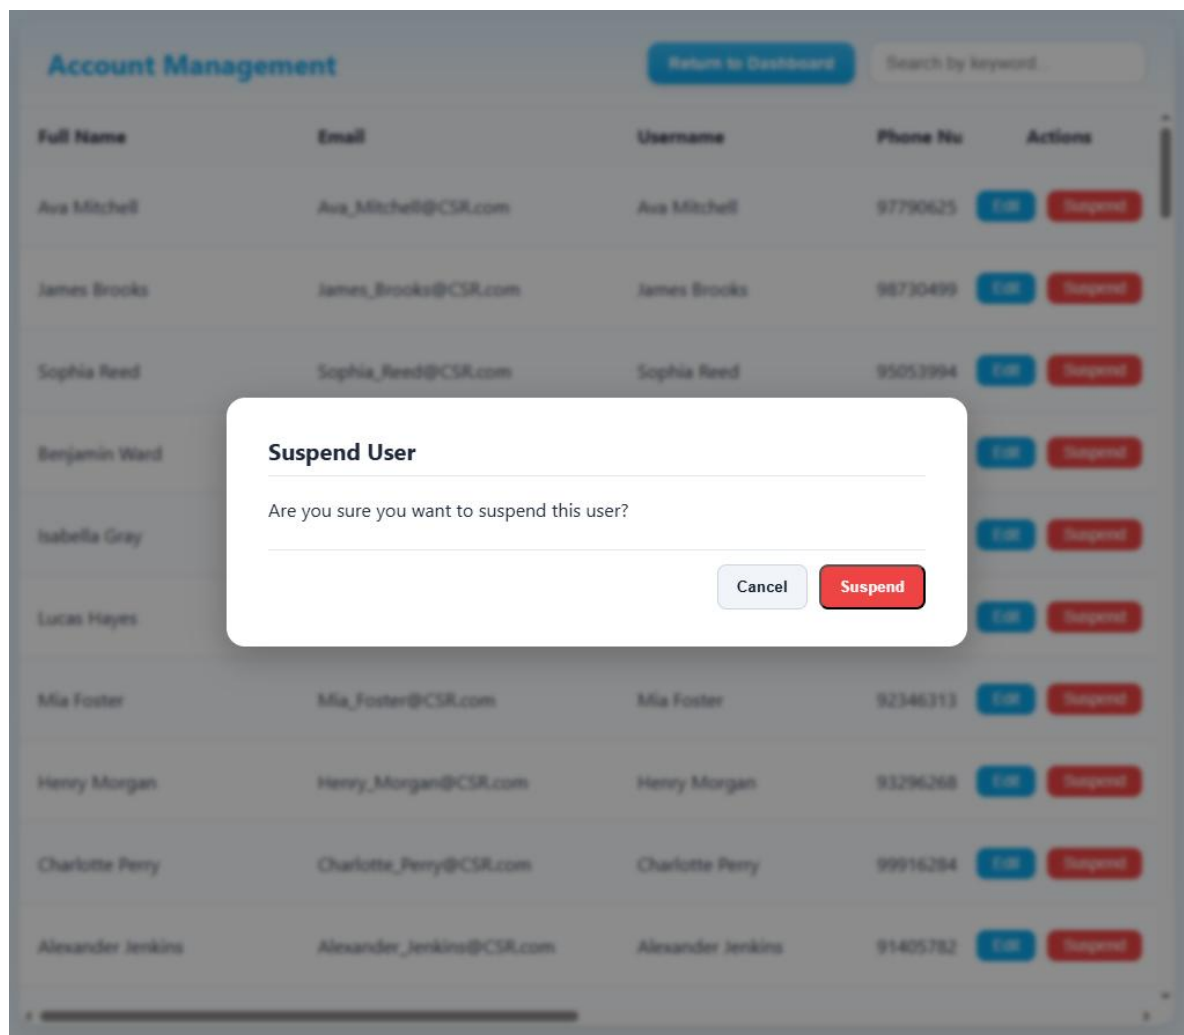

Normal flow:

1. User Admin clicks on “Suspend” on the selected row.
2. System displays a confirmation of suspension.
3. User Admin confirms suspension of user account.
4. System updates the status in the table accordingly and highlights the affected row confirming successful suspension of account.

5. User Admin – Search User Account

As a User Admin, I want to search user account(s) so that I can accurately identify and manage the relevant user account(s).

Use Case Diagram Taiga ID# 05

Use Case Description Taiga ID# 05

Name: User Admin – Search User Account

Stakeholders and goals:

User Admin – search user account(s) to accurately identify and manage the relevant user account(s).

Description:

The User Admin uses the search function to locate specific user account(s) based on criteria such as

`Full Name`, `Email`, `Username`, `Phone Number`, `Address`, `User Profile`, and `Status`.

The system retrieves and displays matching results, allowing the User Admin to quickly identify, view, or manage the desired user account(s).

Actors: User Admin

Pre-condition(s):

- User Admin is logged in.
- User Admin navigate to “Account Management” page

Trigger: User Admin wants to search for a specific user account.

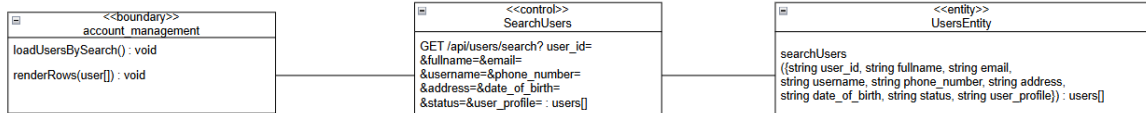

Normal flow:

1. User Admin enters one of the search criteria (e.g., Full Name, Login ID, Email, User Profile).
2. System retrieves and displays all user accounts matching the search criteria.
3. User Admin reviews the search results and may select a user account for further actions (e.g., edit, suspend).

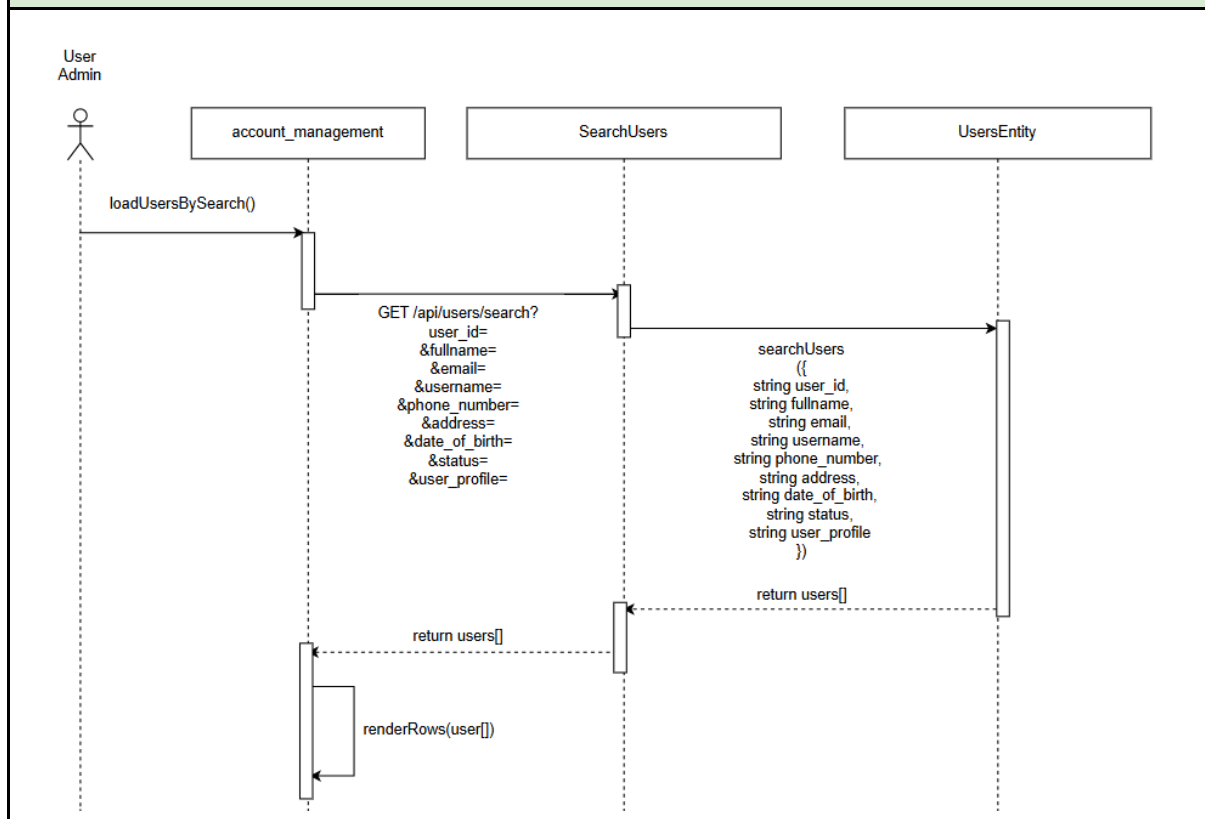

Sub-flows: None

Alternative/Exceptional Flows: None

8. User Admin – Update User Profile

As a User Admin, I want to update user profile(s) so that all user profile information remains current and accurate.

Use Case Diagram Taiga ID# 08

Use Case Description Taiga ID# 08

Name: User Admin – Update User Profile

Stakeholders and goals:

User Admin – update user profile(s) so that all user profile information remains current and accurate.

Description:

The User Admin selects an existing user profile and updates one or more fields such as:

`Name`, `Description`, `Others`.

After submitting the changes, the system validates the input and updates the user profile record. The selected row which was updated is briefly highlighted green to confirm success and the updated information is then reflected in the system for future use.

Actors: User Admin

Pre-condition(s):

- User Admin is logged in.

- User Admin navigate to “Profile Management” page

Trigger: User Admin wants to update existing user profile details.

Normal flow:

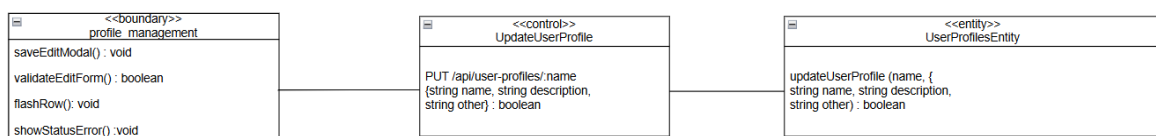

1. User Admin clicks on “Edit” on the selected row.
2. The User Admin can update the following field(s):
 - Name*
 - Description
 - Other Info
3. User Admin submits the updated information.
4. System validates the input (checks for missing fields, data format etc).
5. System saves the updated details, updates the table accordingly, and highlights the affected row confirming successful update.

9. User Admin – Suspend User Profile

As a User Admin, I want to suspend user profile(s) so that I can prevent users with that role from exercising its permissions.

Use Case Diagram Taiga ID# 09

Use Case Description Taiga ID# 09

Name: User Admin – Suspend User Profile

Stakeholders and goals:

User Admin – suspend user profile(s) to prevent all users with that role from exercising its permissions.

Description:

The User Admin reviews the list of user profiles and selects a profile to suspend. Once suspended, the selected row is highlighted green to confirm successful suspension, and all user accounts associated with the affected user profile are restricted from performing or exercising any permissions granted by that profile until reinstated.

Actors: User Admin

Pre-condition(s):

- User Admin is logged in.
- User Admin navigate to “Profile Management” page

Trigger: User Admin wants to suspend user profile to prevent all user accounts under that profile from exercising its permissions.

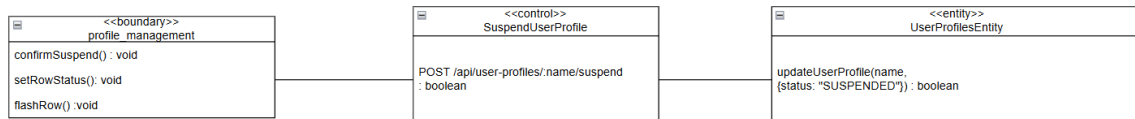

Normal flow:

1. User Admin clicks on “Suspend” on the selected row.
2. System displays and prompts confirmation of suspension.
3. User Admin confirms suspension of selected user profile.
4. System updates the status and the table accordingly, and highlights the affected row confirming successful suspension.

10. User Admin – Search User Profile

As a User Admin, I want to search user profile(s) so that I can accurately identify and manage all relevant user profiles.

Use Case Diagram Taiga ID# 10

Use Case Description Taiga ID# 10

Name: User Admin – Search User Profile

Stakeholders and goals:

User Admin – search user profile(s) to accurately identify and manage all relevant user profile(s).

Description:

The User Admin uses the search function to locate specific user profile(s) based on criteria such as

`Name`, `Description`, `Other`, and `Status`.

The system retrieves and displays matching results, allowing the User Admin to efficiently identify, review, and manage the relevant user profile(s).

Actors: User Admin

Pre-condition(s):

- User Admin is logged in.
- User Admin navigate to “Profile Management” page

Trigger: User Admin wants to search for a specific user profile.

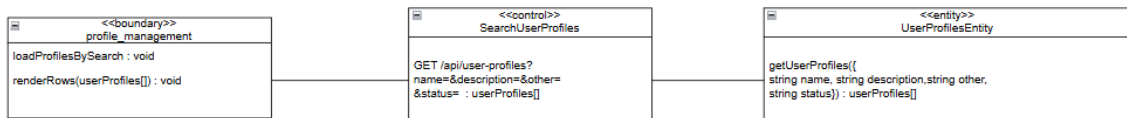

Normal flow:

1. User Admin enters one of the search criteria (e.g., Name, Description, Status).
2. System retrieves and displays all user profile(s) matching the search criteria.
3. User Admin reviews the search results and may select a user profile for further actions (e.g., edit, suspend).

End of Sprint 1

End of Sprint Summary

- Completed the remaining User Admin user stories (#2, #3, #4, #5, #7, #8, #9, #10), finalizing the core functionality of the User Admin.
- Produced the Boundary-Control-Entity (BCE) and Sequence Diagrams for the completed user-stories, ensuring proper documentation of system logic and interactions.
- Successfully allocated manpower for both frontend webpage design and backend API development, preparing for upcoming implementation work.

Next Sprint Focus:

- Conduct a comprehensive review of the Project Specifications to verify that all requirements are met and aligned with client expectations.
- Begin discussions on Test-Driven Development (TDD) principles and establish a testing strategy
- Draft and refine test cases based on implemented features.
- Allocate testing responsibilities among team members to ensure systematic quality and assurance.

Test Cases for Sprint 1

Test Case ID	UA-5
Test Case Description	View a complete list of user accounts and account details as an User Admin.
Precondition	User Admin needs to be logged in with existing user account(s) in the system.
Created by	Roshitha
Test Steps	1. Click on 'Account Management' 2. Observe existing User Accounts and details
Test Data	-
Expected Results	The 'Account Management' page displays a list of user accounts along with their corresponding details.
Actual Results	The 'Account Management' page displays a list of user accounts along with their corresponding details.
Pass/Fail	Pass
Remarks	The account management page has all the User accounts' information.

Test Case ID	UA-6
Test Case Description	View the User Profiles as an User Admin.
Precondition	User Admin needs to be logged in with existing user profile(s) in the system.
Created by	Roshitha
Test Steps	1. Click on 'Profile Management' page 2. Observe the list of existing User Profiles and details.
Test Data	-
Expected Results	The system displays a 'Profile Management' page and list of user profiles' and details.
Actual Results	The system displays a 'Profile Management' page and list of user profiles' and details.
Pass/Fail	Pass
Remarks	The profile management page has all the profiles' information.

Test Case ID	UA-7-1
Test Case Description	Updating a User Account as an User Admin.
Precondition	The User Admin must be logged in with existing user account(s) and on the 'Account Management' page.
Created by:	Roshitha
Test Steps	1. Search and Select targeted user. 2. Edit their 'Phone Number' and 'User Profile'. 3. Save the changes.
Test Data	Target User: JohnLim Phone: 81234456 Email: Lim_John@CSR.com
Expected Results	The account is updated successfully. The updated row highlights green briefly.
Actual Results	The account is updated successfully. The updated row highlights green briefly.
Pass/Fail	Pass
Remarks	The user account is updated successfully.

Test Case ID	UA-7-2
Test Case Description	Updating a User Account with missing and invalid data as an User Admin.
Precondition	The User Admin must be logged in with existing user account(s) and on the 'Account Management' page.
Created by:	Roshitha
Test Steps	1. Search and Select targeted user. 2. Click edit on 'Email' of the user and enter in an invalid email format / Click on "Phone" and enter < 8 digits. 3. Try to save the changes.
Test Data	Email: weihnemail.com / Phone Number: 9123456 (missing last digit)
Expected Results	The system prevents the admin from updating the profile.
Actual Results	The system prevents the admin from updating the profile.
Pass/Fail	Pass
Remarks	Cannot make changes due to invalid email.

Test Case ID	UA-7-3
Test Case Description	Updating a User Account with missing data as an User Admin.
Precondition	The User Admin must be logged in with existing user account(s) and on the 'Account Management' page.
Created by:	Roshitha
Test Steps	1. Search and Select targeted user. 2. Click edit on 'Address' of the user and erase the input leaving it blank. 3. Save the changes.
Test Data	Address
Expected Results	The system notifies the user to provide valid text input before proceeding.
Actual Results	The system notifies the user to provide valid text input before proceeding.
Pass/Fail	Pass
Remarks	The system prompts the user to enter valid text.

Test Case ID	UA-7-4
Test Case Description	Updating a User Account with duplicate email as an User Admin.
Precondition	The User Admin must be logged in with existing user account(s) and on the 'Account Management' page.
Created by:	Roshitha
Test Steps	1. Search and Select targeted user. 2. Click edit on 'Email' of the user and edit in a duplicate email used by one of the user accounts' 3. Try to save the changes.
Test Data	Email: Lim_John@CSR.com
Expected Results	The system prevents the admin from updating the account information.
Actual Results	The system prevents the admin from updating the account information.
Pass/Fail	Pass
Remarks	The system refuses to make changes to the account information due to duplicate email.

Test Case ID	UA-7-5
Test Case Description	Updating a User Account with duplicate login username as an User Admin.
Precondition	The User Admin must be logged in with existing user account(s) and on the 'Account Management' page.
Created by:	Roshitha
Test Steps	1. Search and Select targeted user. 2. Select "Username" of the user and edit in a duplicate username used by one of the user accounts' 3. Try to save the changes.
Test Data	Login ID: JohnLim
Expected Results	The system prevents the admin from updating the account information.
Actual Results	The system prevents the admin from updating the account information.
Pass/Fail	Pass
Remarks	The system refuses to make changes to the account information due to duplicate username.

Test Case ID	UA-8
Test Case Description	Updating a User Profile as an User Admin.
Precondition	User Admin needs to be logged in with existing user profile(s) in the system.
Created by	Roshitha
Test Steps	1. Search and Select targeted profile on 'Profile Management' page. 2. Edit 'Others'. 3. Save the changes.
Test Data	Target Profile: Transportation Admin Description: Helps system user and profile management related to transportation requests Others: Transportation Main Admin
Expected Results	The profile is updated successfully. The updated row highlights green briefly.
Actual Results	The profile is updated successfully. The updated row highlights green briefly.
Pass/Fail	Pass
Remarks	Selected profile information is updated.

Test Case ID	UA-9-1
Test Case Description	Suspending User Account as an User Admin
Precondition	User Admin needs to be logged in with existing user account(s) in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Account Management' 2. Locate targeted account 3. Click 'Suspend' 4. Confirm action
Test Data	Target User: John Lim
Expected Results	User Account status changes to 'Suspended' with the Reinstate button replacing the Suspend button and the status is updated on the table and highlights green briefly.
Actual Results	User Account status changes to 'Suspended' with the Reinstate button replacing the Suspend button and the status is updated on the table and highlights green briefly.
Pass/Fail	Pass
Remarks	The selected account is suspended, toggling the 'suspend' option to 'reactivate'.

Test Case ID	UA-9-2
Test Case Description	Unsuspending User Account as an User Admin
Precondition	User Admin needs to be logged in with existing user account(s) in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Account Management' 2. Locate targeted account 3. Click 'Reinstate' 4. Confirm action
Test Data	Target User: John Lim
Expected Results	The system restores the account successfully with the Suspend button replacing the Reinstate button and the status is updated on the table and highlights green briefly.
Actual Results	The system restores the account successfully with the Suspend button replacing the Reinstate button and the status is updated on the table and highlights green briefly.
Pass/Fail	Pass
Remarks	The suspended account is reactivated, toggling the 'reactivate' option to 'suspend'.

Test Case ID	UA-10-1
Test Case Description	Suspending User Profile as an User Admin
Precondition	User Admin needs to be logged in with existing user profile(s) in the system.
Created by	Roshitha
Test Steps	1. Click on 'Profile Management' page 2. Locate targeted account 3. Click 'Suspend' 4. Confirm action
Test Data	Target profile: Transportation Admin
Expected Results	User Profile status changes to 'Suspended' with the Reinstate button replacing the Suspend button and the status is updated on the table and highlights green briefly.
Actual Results	User Profile status changes to 'Suspended' with the Reinstate button replacing the Suspend button and the status is updated on the table and highlights green briefly.
Pass/Fail	Pass
Remarks	The selected profile is suspended, toggling the 'suspend' option to 'reinstate'.

Test Case ID	UA-10-2
Test Case Description	Reinstating User Profile as a User Admin
Precondition	User Admin needs to be logged in with existing user profile(s) in the system.
Created by	Roshitha
Test Steps	1. Click on the 'Profile Management' page 2. Locate targeted account 3. Click 'Suspend' 4. Confirm action
Test Data	Target profile: Transportation Admin
Expected Results	User Profile status changes to 'Active' with the Suspend button replacing the Reinstate button and the status is updated on the table and highlights green briefly.
Actual Results	User Profile status changes to 'Active' with the Suspend button replacing the Reinstate button and the status is updated on the table and highlights green briefly.
Pass/Fail	Pass
Remarks	The suspended profile is reinstated, toggling the 'reinstate' option to 'suspend'.

Test Case ID	UA-11
Test Case Description	Search for a User Account as an User Admin.
Precondition	User Admin needs to be logged in with existing user account(s) in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Account Management' page 2. Type keyword in the search bar 3. Click enter
Test Data	Keyword: John
Expected Results	The 'Account Management' page displays user records filtered according to the entered search keyword.
Actual Results	The 'Account Management' page displays user records filtered according to the entered search keyword.
Pass/Fail	Pass
Remarks	The search query for user accounts returns results related to the keyword: 'John'.

Test Case ID	UA-12
Test Case Description	Search for a User Profile as an User Admin.
Precondition	User Admin needs to be logged in with existing user profile(s) in the system.
Created by	Roshitha
Test Steps	1. Open the 'Admin Dashboard' page and click on 'Profile Management' page 2. Type keyword in the search bar 3. Click enter
Test Data	Keyword: Transportation
Expected Results	The 'Profile Management' page displays user records filtered according to the entered search keyword.
Actual Results	The 'Profile Management' page displays user records filtered according to the entered search keyword.
Pass/Fail	Pass
Remarks	The search query for user profiles returns results related to the keyword: 'Transport'.

CSIT314 – Sparkling Fuji Apple

Sprint 2

Sprint 2 Duration: 18th October 2025 – 24th October 2025

Location: Online call (Discord)

Date: 18th October 2025 (18/10/2025)

Time: 12:00PM – 01:00PM

Attendance: 6/6

Name	UOW ID
Team Member	<REDACTED>
Team Member	<REDACTED>
Team Member	<REDACTED>
Team Member	<REDACTED>
Roshitha	<REDACTED>
Team Member	<REDACTED>

Agenda items

1. **Review project specifications collaboratively** to ensure all **functional and non-functional requirements** are fully met and compliant with project expectations.
2. **Discuss and align on Test-Driven Development (TDD) practices** to establish a consistent testing approach across the team.
3. **Develop and refine test cases** based on implemented features and identified requirements.

4. **Assign testing responsibilities** among team members to ensure comprehensive test coverage and accountability.

Taiga Screenshots

The image displays two screenshots of the Taiga project management tool, showing Kanban boards for two different user stories.

22. PIN – Create Service Request

As a PIN, I want to create service requests so that I can seek assistance for my needs.

Use Case Diagram Taiga ID# 22

Use Case Description Taiga ID# 22

Name: PIN – Create Service Request

Stakeholders and goals:

PIN – wants to create a new service request seeking assistance for their needs.

Description:

The PIN fills in the required details to create a new service request for support or assistance. The system records the request along with relevant information such as:

`Category`, **`Title`** , and **`Description`**.

Once submitted, the request is logged into the system and made available for review and follow-up by CSR Representatives.

Actors: Person-In-Need (PIN)

Pre-condition(s): PIN is logged in.

Trigger: PIN decides to create a new service request

Normal flow:

1. PIN navigate to “Create Service Request” page
2. PIN fills in the required information:
 - Category*
 - Title*
 - Description*
3. PIN submits the form.
4. System validates input (checks for missing fields – Category*, Title*, Description*)
5. The new service request is created
6. System displays a success message “Request submitted successfully!”

Sub-flows: None

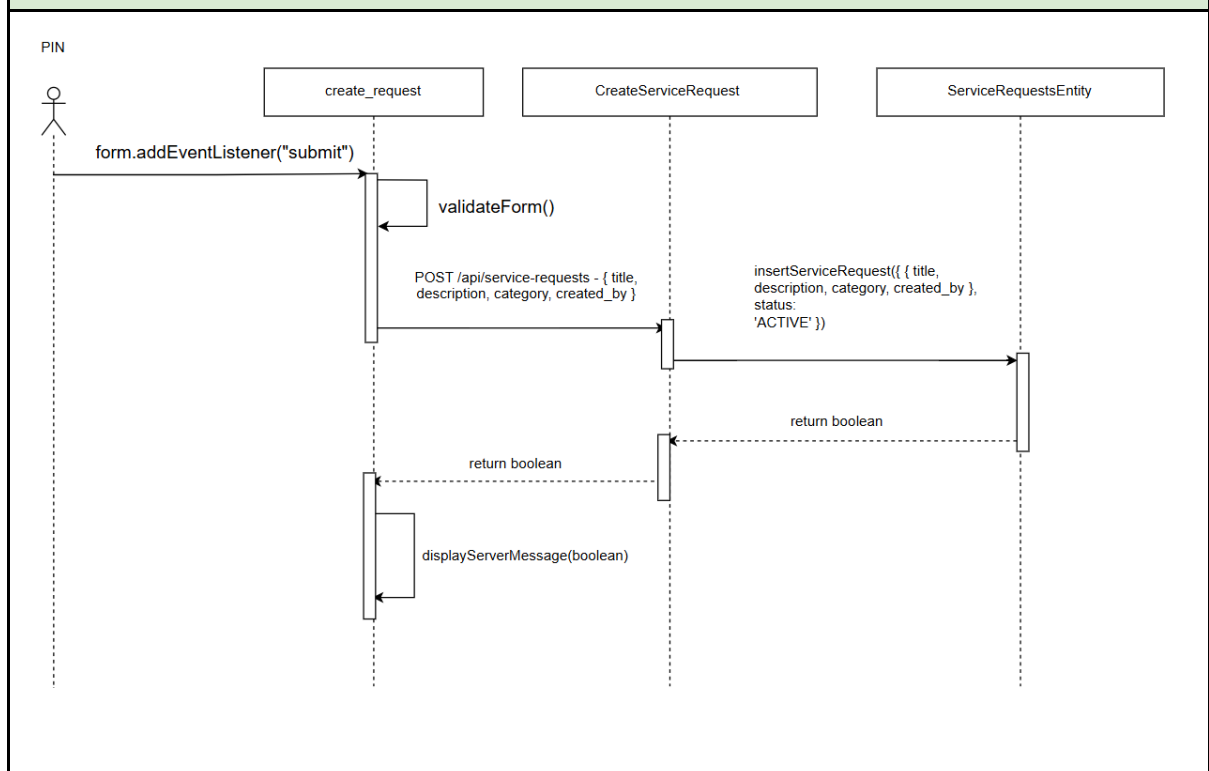

Alternative/Exceptional Flows:

N.A. (Service Request titles are not unique - multiple PIN's may have the same title e.g., “Request for Assistance...”)

23. PIN – Search Service Request

As a PIN, I want to search my service requests so that I can locate a specific request efficiently.

Use Case Diagram Taiga ID# 23

Use Case Description Taiga ID# 23

Name: PIN – Search Service Request

Stakeholders and goals:

PIN - want to search service requests to locate a specific request efficiently.

Description:

The PIN uses the search function to locate specific service request(s) based on criterias such as

`Title`, `Category`, `Description`, and additional filtering options such as **`Service (Category dropdown)`, `From (Date) - To (Date)`, `Status` (ACTIVE | CANCELLED | COMPLETED)**

**Note: From (Date) - To (Date) filter checks for date created, date completed (if available, if not assume it is still ongoing). If From is selected without To, it is assumed From <date selected> - To <current date>. If To is selected without From, it is assumed From <the first request ever created> - To <date selected>.*

The system retrieves and displays matching results, allowing the PIN to efficiently identify, review, and manage the relevant service request(s).

Actors: Person-In-Need (PIN)

Pre-condition(s):

- PIN is logged in.
- PIN navigate to “Manage Service Requests” page

Trigger: PIN wants to search for a specific service request(s)

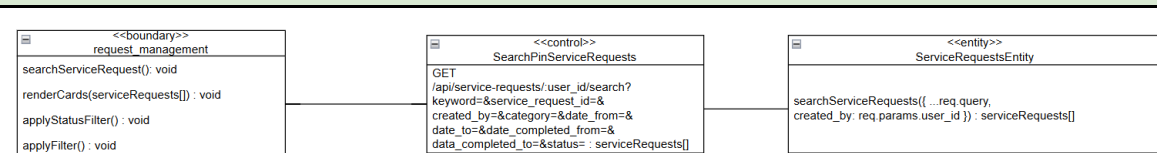

Normal flow:

1. PIN enters one of the search criteria (e.g., Title, Description, Status).
2. System retrieves and displays all service requests matching the search criteria.
3. PIN reviews the search results and may select a service request for further actions (e.g., ‘Edit’, ‘Cancel Request’).

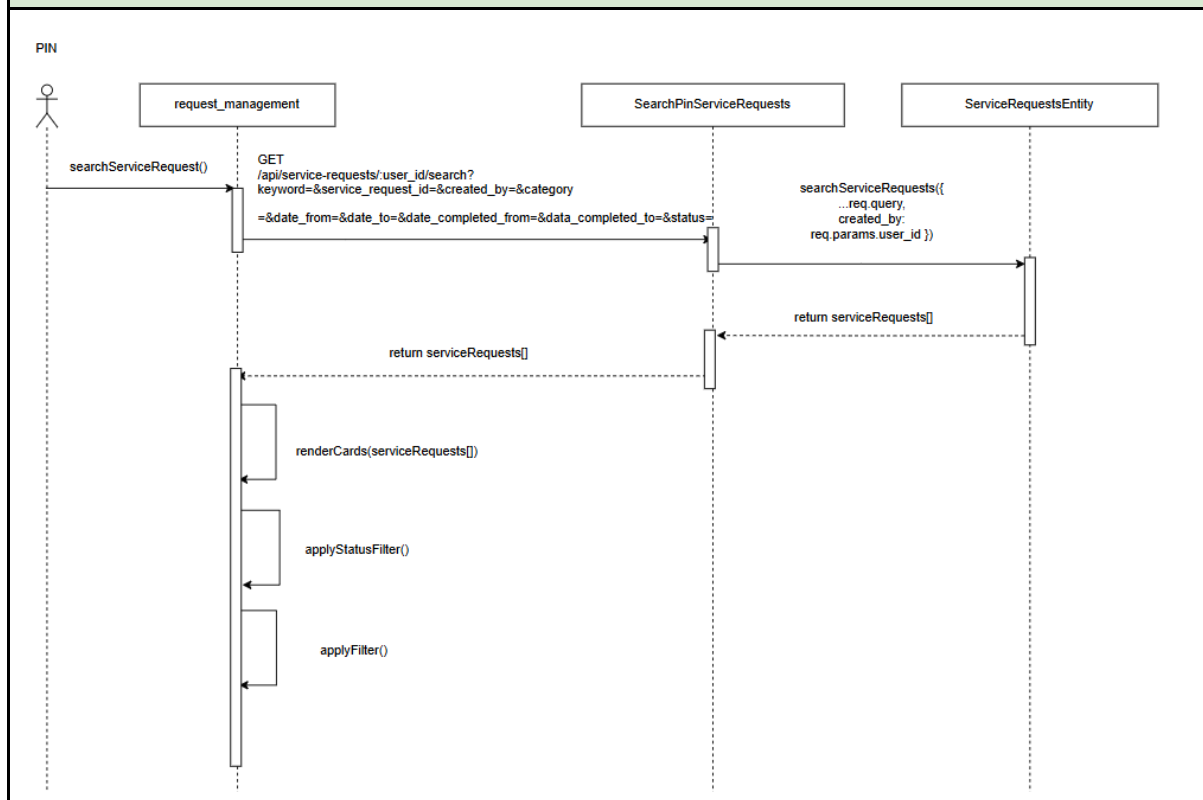

Sub-flows: None

Alternative/Exceptional Flows: None

24. PIN – View Service Request

As a PIN, I want to view the details of my service requests so that I can review their status and information.

Use Case Diagram Taiga ID# 24

Use Case Description Taiga ID# 24

Name: PIN – View Service Request

Stakeholders and goals:

PIN - want to view the details of my service requests to review their status and information.

Description:

The PIN accesses the list of existing service requests to review and verify their details. The system displays all service requests with relevant information such as: **`Category`**, **`Title`**, **`Description`**, **`Status` (ACTIVE | CANCELLED | COMPLETED)**, **`Date Created`** (when the request was created), **`Date Completed`** (when the request was completed, otherwise null “—”), and **`Matched By: <CSR Rep name>`** (if request is completed).

Actors: Person-In-Need (PIN)

Pre-condition(s):

- PIN is logged in.
- PIN navigate to “Manage Service Requests” page

Trigger: PIN wants to view service request

Normal flow:

1. PIN navigates to “Manage Service Request” page
2. System displays a list of service request(s) made by PIN’s.

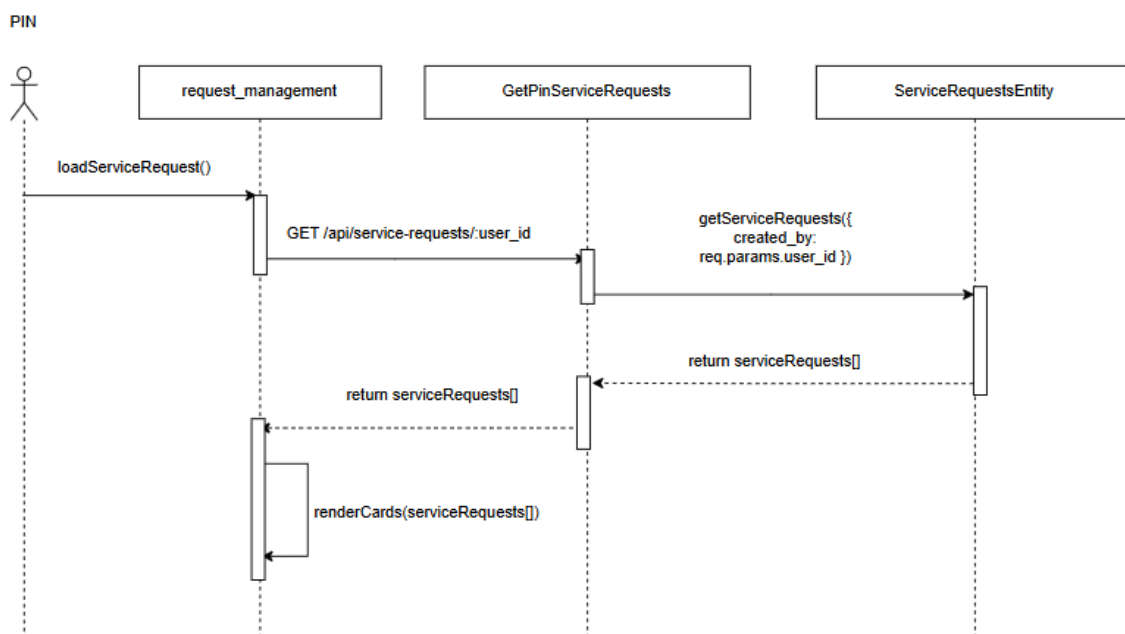

Sub-flows: None

Alternative/Exceptional Flows: None

25. PIN – Update Service Request

As a PIN, I want to update my service requests so that information remains accurate and current.

Use Case Diagram Taiga ID# 25

Use Case Description Taiga ID# 25

Name: PIN – Update Service Request

Stakeholders and goals:

PIN - wants to update their service request details so that information remains accurate and current.

Description: The PIN user selects an existing service request and updates its details, such as:

`Title`, `Category`, or `Description`.

After successful update of service request details, the system validates the input and updates the service request record. The affected card is flashed green for visual confirmation of successful update, and updated information is reflected in the system for future use.

Actors: Person-In-Need (PIN)

Pre-condition(s):

- PIN is logged in.
- PIN navigates to “Manage Service Request” page

Trigger: PIN decides to update service requests

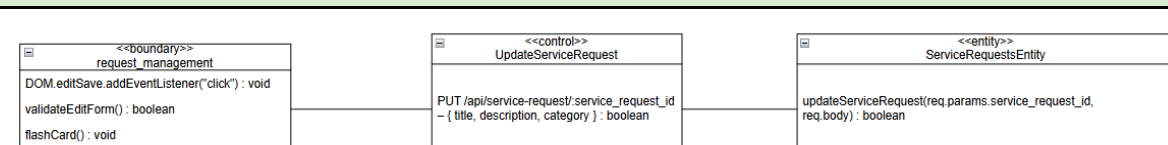

Normal flow:

1. PIN clicks on “Edit” on the selected request.
2. The PIN can update the following field:
 - Category*
 - Title*
 - Description*
3. PIN submits the updated information.
4. System validates the input (checks for missing fields, data format etc).
5. System saves the updated details and updates the request details and highlights the card briefly for successful update confirmation.

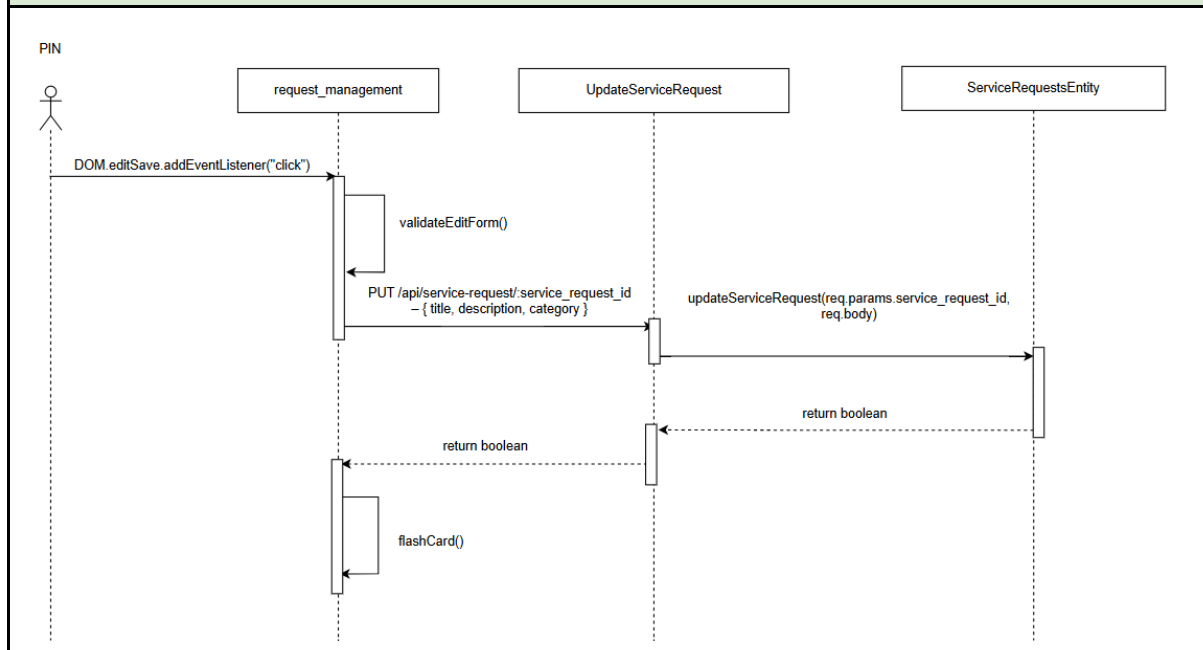

Sub-flows: None

Alternative/Exceptional Flows: None

26. PIN – Delete / Cancel Service Request

As a PIN, I want to delete (or cancel) a service request so that outdated or resolved requests are removed from the system.

Use Case Diagram Taiga ID# 26

Use Case Description Taiga ID# 26

Name: PIN – Delete Service Request

Stakeholders and goals:

PIN - want to delete a service request so that outdated or resolved requests are removed from the system.

Description:

The PIN selects a service request to delete (**soft-delete - cancel**). Once confirmed, the system “**cancel**s” the selected request, marks its status as **CANCELLED**, and highlights the affected card to confirm successful deletion / cancellation of request, this ensures that only relevant and active requests are retained for management and tracking.

Actors: Person-In-Need (PIN)

Pre-condition(s):

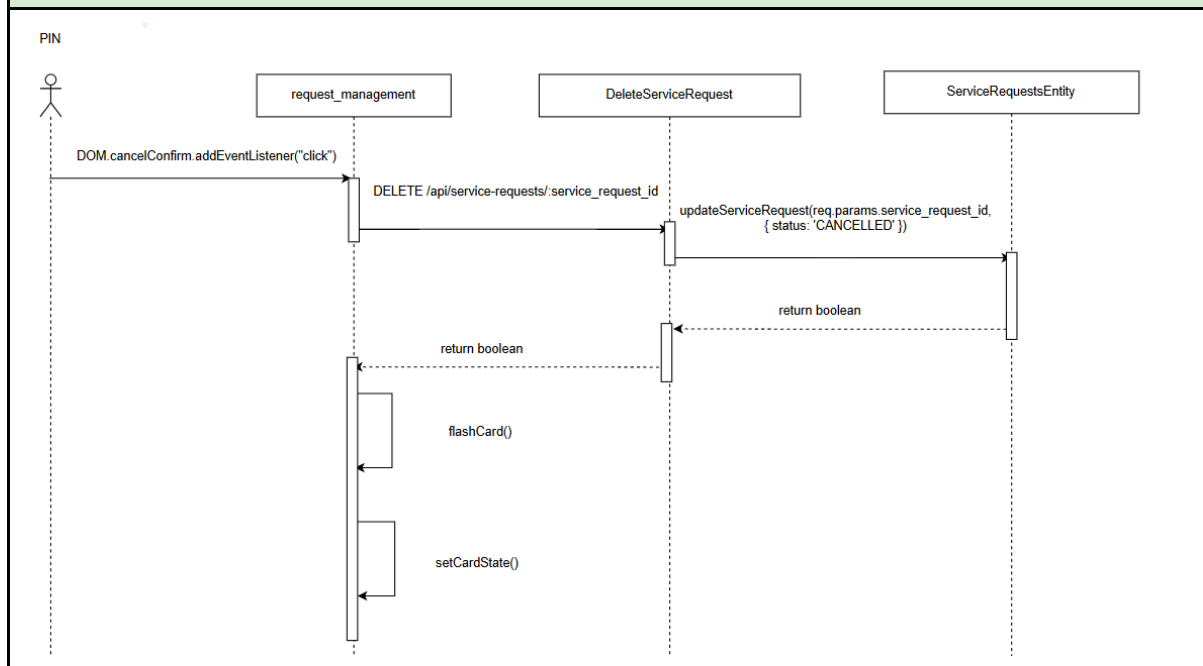

- PIN is logged in.
- PIN navigate to “Manage Service Requests” page

Trigger: PIN decides to delete the service request**Normal flow:**

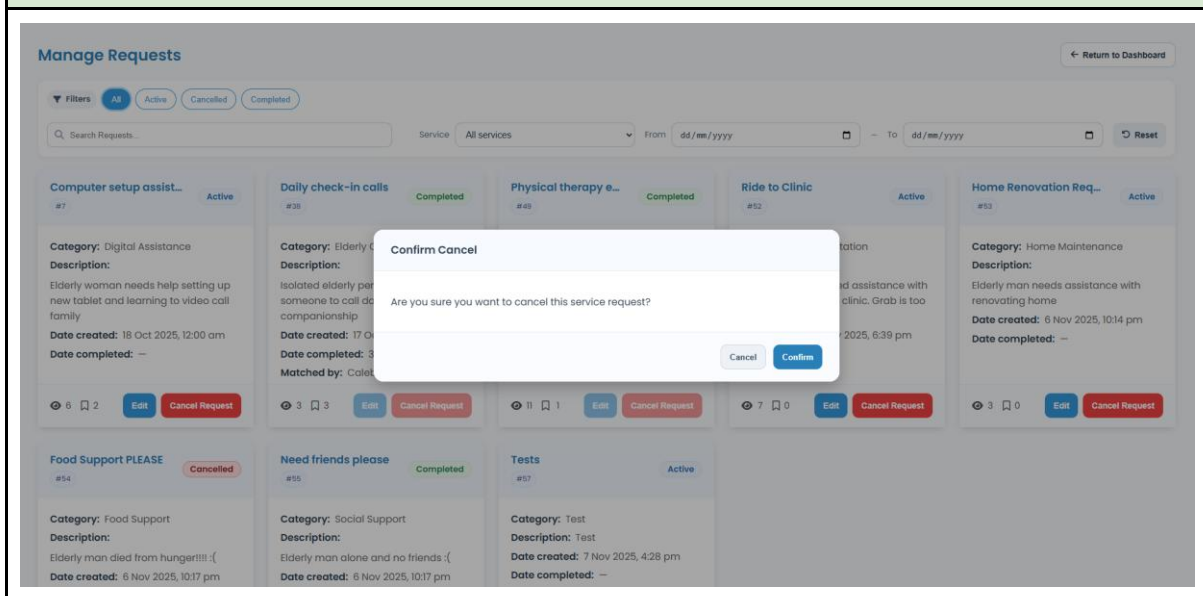

1. PIN clicks on “Cancel Request” on the selected row.
2. System displays a confirmation of deletion.
3. PIN confirms deletion of service request.
4. System would highlight the card to confirm successful cancellation.

31. PIN – Log in

As a PIN, I want to log in so that I can securely access my account and manage my requests.

Use Case Diagram Taiga ID# 31

Use Case Description Taiga ID# 31

Name: PIN – Log In

Stakeholders and goals:

PIN - wants to access their account

Description:

This allows the PIN to log in to the website by providing their credentials: Login ID / Email and Password, allowing the PIN to authenticate and gain access to the system's protected features.

Actors: Person-In-Need (PIN)

Pre-condition(s):

- PIN has a valid user account.
- PIN's Account / Profile is not Suspended.

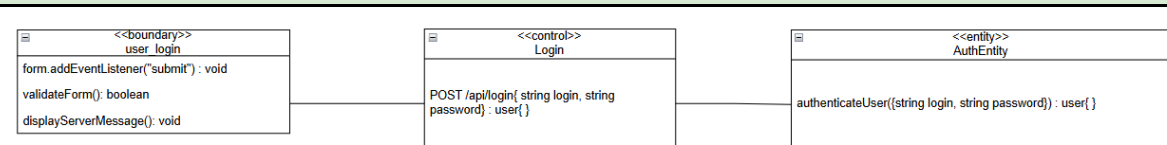

Trigger: PIN decides to log in.

Normal flow:

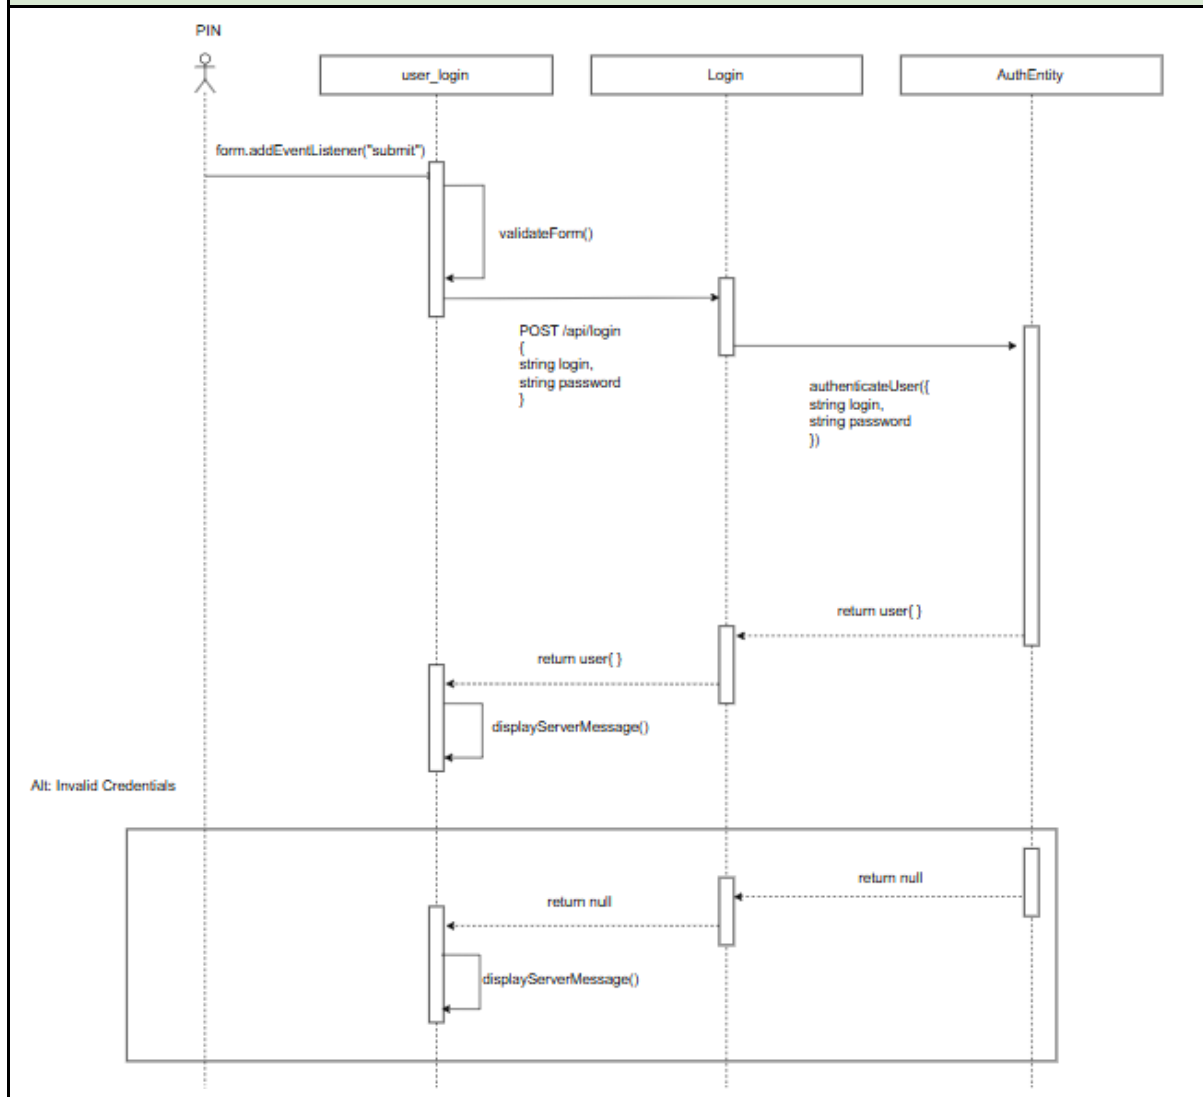

1. PIN enters (Login ID / Email) + Password.
2. PIN submits the form.
3. System validates login credentials.
4. System authenticates and authorizes, redirecting to PIN Dashboard.

Sub-flows: None**Alternative/Exceptional Flows:**

3a. [Invalid Credentials]: System displays error message.

32. PIN – Log out

As a PIN, I want to log out so that I can ensure my account remains secure when not in use.

Use Case Diagram Taiga ID# 32

Use Case Description Taiga ID# 32

Name: PIN – Log Out

Stakeholders and goals:

PIN – wants to log out securely to prevent unauthorized

Description:

This allows the PIN to securely end their active session in the system. When the PIN selects the “Log out” function, the system terminates the current session and returns the user to the login screen or home page, preventing further access until they log in again.

Actors: Person-In-Need (PIN)

Pre-condition(s): PIN is logged in.

Trigger: PIN decides to log out.

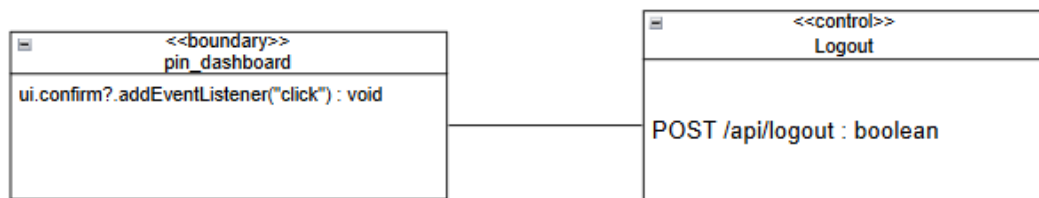

Normal flow:

1. Platform Management clicks on the “Log out” button.
2. The system prompts a confirmation if the Platform Management would like to log out.
3. The system terminates the current session.
4. System redirects the Platform Management to the Login page.

33. Platform Management – Create Categories

As a Platform Management, I want to create categories so that I can efficiently manage and organize the different types of support services available.

Use Case Diagram Taiga ID#

Use Case Description Taiga ID# 33

Name: Platform Management – Create Categories

Stakeholders and goals:

Platform Management - create categories to efficiently manage and organize the different types of support services available.

Description:

The Platform Management creates a new category by providing the required details such as

`Name`, and **`Description`**.

Once created, the category will serve as a grouping mechanism to organize related support services, making it easier to manage and navigate within the system.

Actors: Platform Management

Pre-condition(s): Platform Management is logged in.

Platform Management navigates to 'Create Category' page.

Trigger: Platform Management decides to create a new category for support services.

Normal flow:

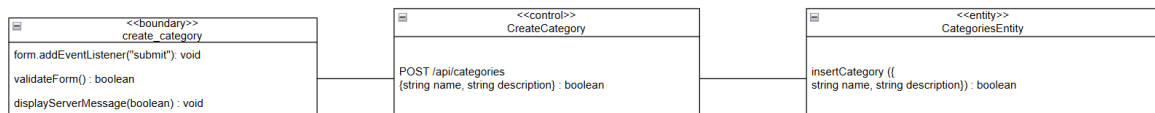

1. Platform Management navigate to "Create Category" page
2. Platform Management fills in the required information:
 - Name*
 - Description*
3. Platform Management submits the form.
4. System validates input (checks for missing fields – name*)
5. System displays "Category created successfully!"

Sub-flows: None

Stakeholders and goals:

As a Platform Management - want to delete categories to remove outdated, duplicate, or irrelevant categories and keep the platform organized and accurate.

Description:

The Platform Management selects a category to delete (soft-delete). Once confirmed, the system removes the selected category from the platform, ensuring that only relevant and accurate categories remain for organizing support services.

Actors: Platform Management

Pre-condition(s):

- Platform Management is logged in.
- Platform Management navigate to “Manage Category” page

Trigger: Platform Management decides to delete a category.

Normal flow:

1. Platform Management clicks on “Archive” on the selected row.
2. System displays a confirmation prompt.
3. Platform Management confirms the archive of the selected category.
4. System highlights the affected row to confirm successful archive of category.

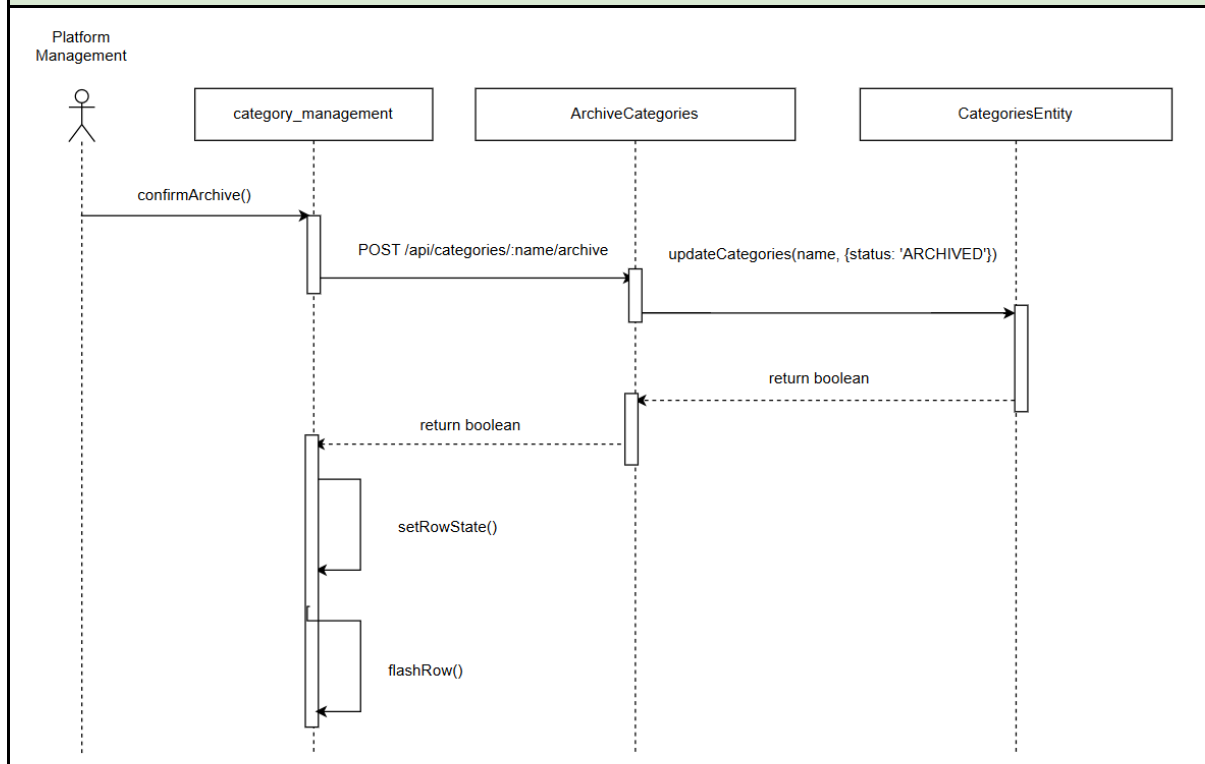

Sub-flows: None

Alternative/Exceptional Flows: None

37. Platform Management – Search Categories

As a Platform Management, I want to search categories so that I can quickly locate and manage a particular category with ease.

Use Case Diagram Taiga ID# 37

Use Case Description Taiga ID# 37

Name: Platform Management – Search Categories

Stakeholders and goals:

Platform Management - want to search categories to quickly locate and manage a particular category with ease.

Description:

The Platform Management uses the search function to locate specific category(ies) based on criteria such as:

`Name`, `Description`

The system retrieves and displays matching results, allowing the Platform Management to efficiently identify, review, and manage the relevant categor(ies).

Actors: Platform Management

Pre-condition(s):

- Platform Management is logged in.

- Platform Management navigate to “Manage Category” page

Trigger: Platform Management wants to search for a specific category

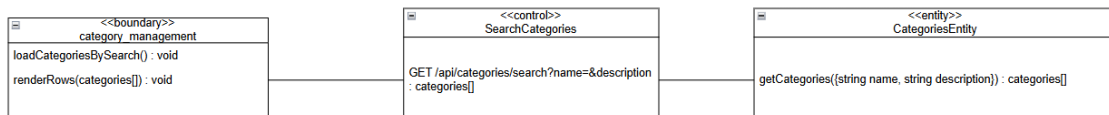

Normal flow:

1. Platform Management enters one of the search criteria (e.g., Name, Description).
2. System retrieves and displays all category(ies) matching the search criteria.
3. Platform Management reviews the search results and may select a category for further actions (e.g., edit, delete).

38. Platform Management – Log In

As a Platform Management, I want to log in so that I can securely access the

Use Case Diagram Taiga ID# 38

system.

Use Case Description Taiga ID# 38

Name: Platform Management – Log In

Stakeholders and goals:

Platform Management - wants to access their account

Description:

This allows the Platform Management to log in to the website by providing their credentials: Login ID / Email and Password, allowing the Platform Management to authenticate and gain access to the system's protected features.

Actors: Platform Management

Pre-condition(s):

- Platform Management has a valid user account.
- Platform Management's Account / Profile is not Suspended.

Trigger: Platform Management decides to log in.

Normal flow:

1. Platform Management enters (Login ID / Email) + Password.

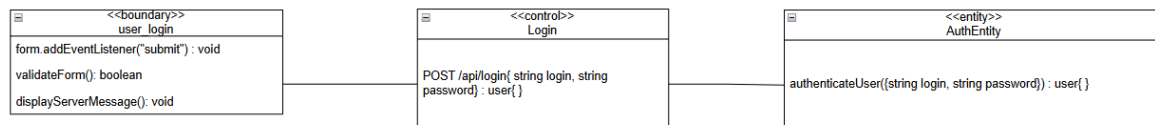

2. Platform Management submits the form.
3. System validates login credentials.
4. System authenticates and authorizes, redirecting to Platform Management Dashboard.

Sub-flows: None

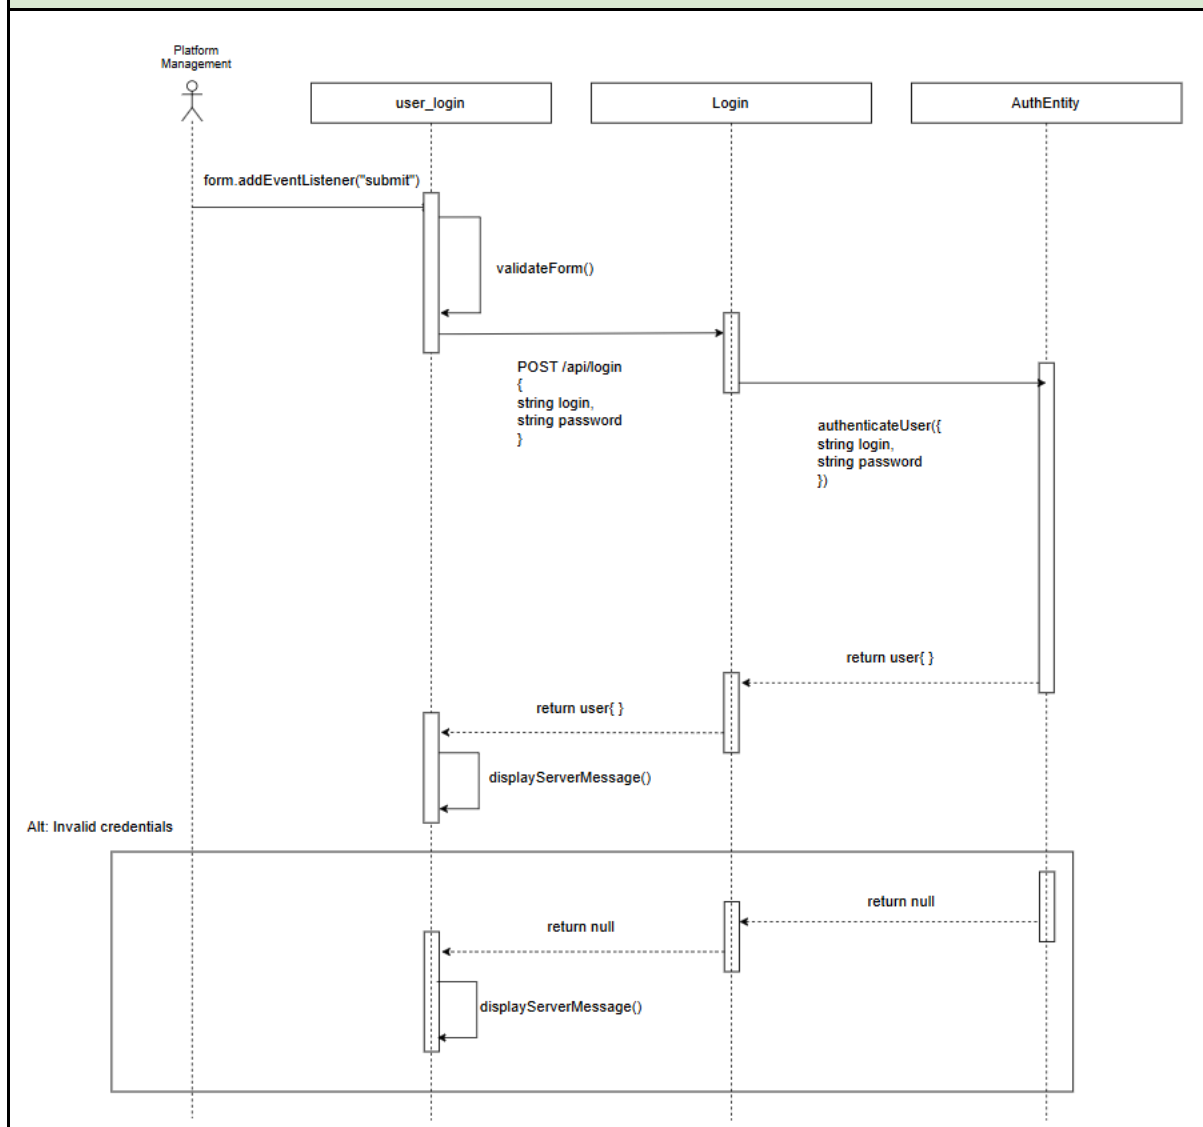

Alternative/Exceptional Flows:

3a. [Invalid Credentials]: System displays error message.

39. Platform Management – Log Out

As a Platform Management, I want to log out so that I can ensure my account remains secure when not in use.

Use Case Diagram Taiga ID# 39

Use Case Description Taiga ID# 39

Name: Platform Management – Log Out

Stakeholders and goals:

Platform Management – wants to log out securely to prevent unauthorized

Description:

This allows the Platform Management to securely end their active session in the system. When the Platform Management selects the “Log out” function, the system terminates the current session and returns the user to the login screen or home page, preventing further access until they log in again.

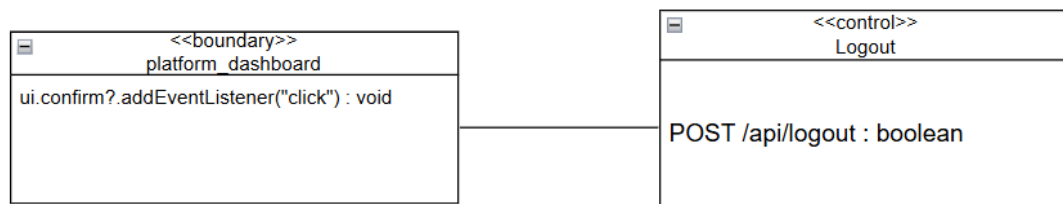

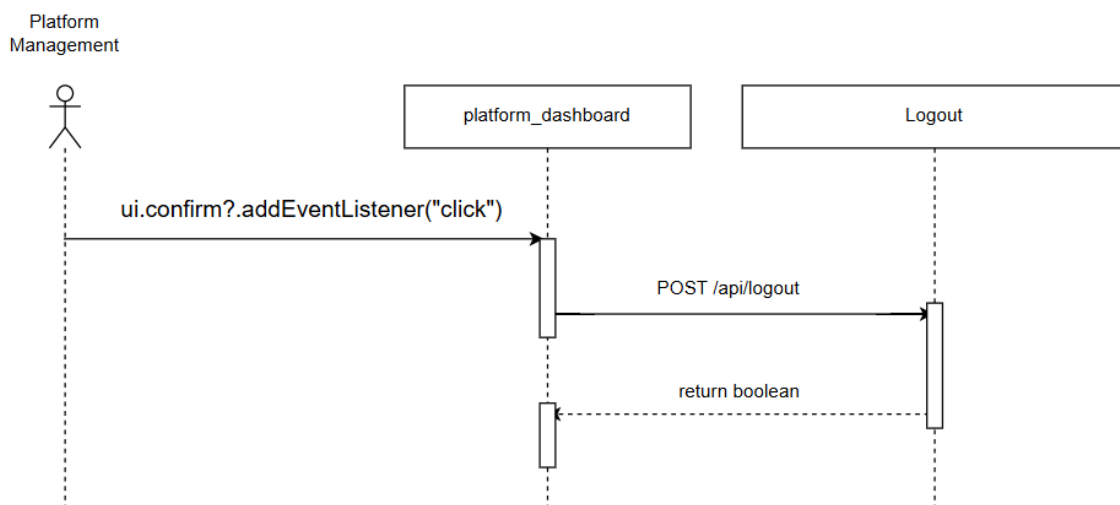

Actors: Platform Management

Pre-condition(s): Platform Management is logged in.

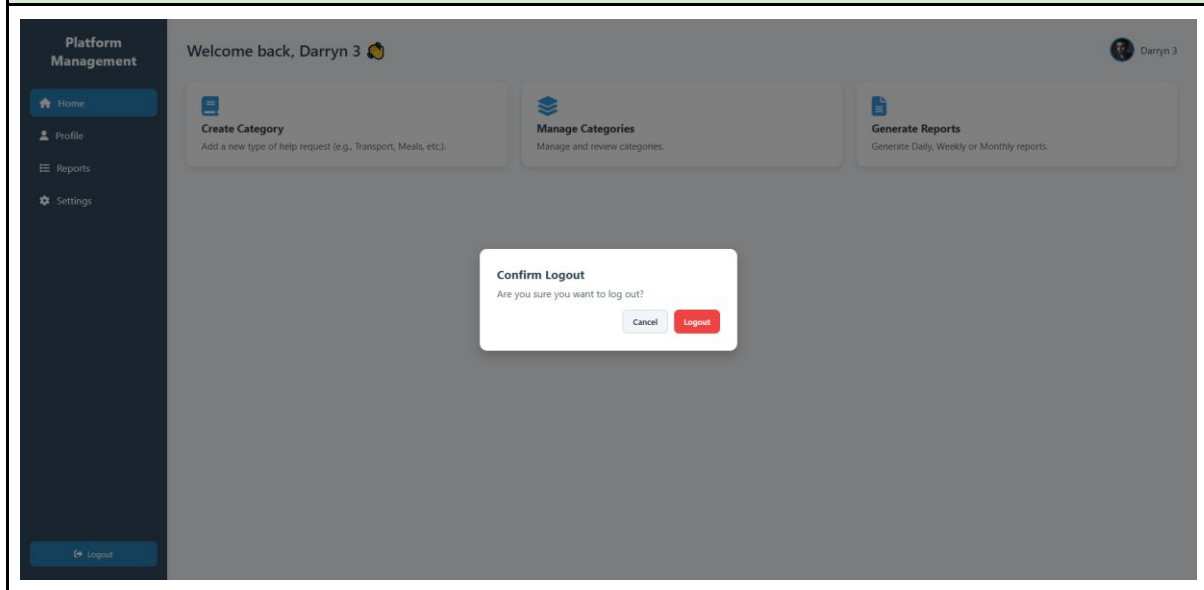

Trigger: Platform Management decides to log out.

Normal flow:

1. Platform Management clicks on the “Log out” button.
2. The system prompts a confirmation if the Platform Management would like to log out.
3. The system terminates the current session.
4. System redirects the Platform Management to the Login page.

End of Sprint 2

End of Sprint Summary:

- Conducted a thorough review with the team of the Project Specifications to ensure all functional and non-functional requirements are fully met and compliant with expectations.
- Engaged in in-depth discussions on Test-Driven Development (TDD) to align the team's understanding of testing principles and their integration into the development workflow.
- Drafted and refined initial test cases corresponding to completed user stories, establishing the foundation for systematic testing.
- Allocated testing responsibilities among team members to ensure efficient test coverage and accountability.

Next Sprint Focus:

- Complete any remaining User Stories and develop the corresponding BCE and Sequence Diagrams.
- Continue refining test cases and further implement TDD practices.
- Clarify any project-related queries with Mr. Terence during the upcoming tutorial on 31st October 2025.

Test Cases for Sprint 2

Test Case ID	PIN-1
Test Case Description	Create a Service Request as Person-In-Need.
Precondition	Person-In-Need needs to be logged in and at least one active category must exist in the system.
Created by:	Roshitha
Test Steps	1. Navigate to the 'Create Service Request' page. 2. Select a valid active category 3. Enter valid data in 'Title'. 4. Enter valid data in 'Description' 5. Click 'Submit'
Test Data	Target Request: Food Support Title: Food Donation Help Description: Need food supplies for senior home
Expected Results	The request is created and displays a ' Request submitted successfully' message.
Actual Results	The request is created and displays a ' Request submitted successfully' message.
Pass/Fail	Pass
Remarks	Acknowledged with "Request submitted successfully.

Test Case ID	PIN-2
Test Case Description	Search Service Requests as a Person-In-Need.
Precondition	Person-In-Need needs to be logged in with existing requests in the system.
Created by:	Roshitha
Test Steps	1. Click on the 'Manage Service Requests' page. 2. Enter the keyword and search to apply filters. 3. Observe list updates.
Test Data	Keyword: Food
Expected Results	The system presents the 'Manage Service Requests' page with user records filtered according to the search keyword.
Actual Results	The system presents the 'Manage Service Requests' page with user records filtered according to the search keyword.
Pass/Fail	Pass
Remarks	Displays results with search keyword: 'food' (case-sensitive)

Test Case ID	PIN-3
Test Case Description	Update an existing Service Request as Person-In-Need.
Precondition	Person-In-Need must be logged in with at least one existing request and active categories available in the system.
Created by:	Roshitha
Test Steps	1. On 'Manage Service Requests', click 'Edit' on a request 2. Change 'Title' to a new valid value 3. Change Description to a new valid value 4. Change Category to another category 5. Click 'Save'
Test Data	Target Request: Food Support Title: Donation Help for Food Description: Updated request details
Expected Results	The request updates successfully. The card is highlighted in green briefly. No error messages are displayed.
Actual Results	The request updates successfully. The card is highlighted in green briefly. No error messages are displayed.
Pass/Fail	Pass
Remarks	Request information updated.

Test Case ID	PIN-4
Test Case Description	View the details of a Service Request as Person-In-Need.
Precondition	Person-In-Need must be logged in with at least one existing request.
Created by:	Roshitha
Test Steps	1. Click on 'Manage Service Requests' 2. Observe the service requests
Test Data	-
Expected Results	The 'Manage Service Requests' page displays all service requests with relevant information.
Actual Results	The 'Manage Service Requests' page displays all service requests with relevant information.
Pass/Fail	Pass
Remarks	Organised in manage request page.

Test Case ID	PIN-5
Test Case Description	Delete an existing Service Request as a Person-In-Need.
Precondition	Person-In-Need must be logged in with at least one existing active service request.
Created by:	Roshitha
Test Steps	1. Click 'Manage Service Requests' 2. Click on 'Cancel' on selected request 3. Confirm in the Cancel Modal
Test Data	Target Request: Food Donation Help
Expected Results	The system successfully cancels the request and the selected request's status changes to 'Cancel'. The Cancel button is replaced by a Restore button. The card is highlighted green briefly.
Actual Results	The system successfully cancels the request and the selected request's status changes to 'Cancel'. The Cancel button is replaced by a Restore button. The card is highlighted green briefly.
Pass/Fail	Pass
Remarks	Request cancellation is confirmed with a cancellation modal, the cancel option toggles to restore option.

Test Case ID	PIN-6
Test Case Description	Restore a previously cancelled Service Request as a Person-In-Need.
Precondition	Person-In-Need must be logged in with at least one existing cancelled service request.
Created by:	Roshitha
Test Steps	1. Click 'Manage Service Requests' 2. Locate a 'Cancelled' request 3. Click 'Restore' on the request 4. Confirm restoration
Test Data	Target Request: Food Donation Help
Expected Results	The selected request's status changes to 'Active'. The card is highlighted in green briefly. The Restore button is replaced by a Cancel button.
Actual Results	The selected request's status changes to 'Active'. The card is highlighted in green briefly. The Restore button is replaced by a Cancel button.
Pass/Fail	Pass

Remarks	Request restoration is confirmed with a restore confirmation modal, the restore option toggles to cancel option.
---------	--

Test Case ID	PIN-7
Test Case Description	Login successfully and verify redirection to dashboard.
Precondition	Valid Person-In-Need credentials exist in the system.
Created by:	Roshitha
Test Steps	1. Open the 'Login' page 2. Enter a valid username and password 3. Click 'Login'
Test Data	Login ID: LiamCarter Password: LiamCarter
Expected Results	The user is authenticated successfully. Redirects to the 'PIN Dashboard'.
Actual Results	The user is authenticated successfully. Redirects to the 'PIN Dashboard'.
Pass/Fail	Pass
Remarks	Automatically logged in and redirected to the PM dashboard according to the user role.

Test Case ID	PIN-8
Test Case Description	Log out from the dashboard.
Precondition	Person-In-Need needs to be logged in and on any dashboard.
Created by:	Roshitha
Test Steps	1. Click 'Log out' button 2. Confirm system prompt for logging out
Test Data	-
Expected Results	The modal closes and the user is redirected to the 'Login page' and terminates the session.
Actual Results	The modal closes and the user is redirected to the 'Login page' and terminates the session.
Pass/Fail	Pass
Remarks	PIN is logged out and redirected back to the login page.

Test Case ID	PM-1
Test Case Description	Create a new Category as a Platform Administrator.
Precondition	Platform Administrator must be logged in and select the "Create Category" page.
Created by:	Roshitha
Test Steps	1. Navigate to the 'Create Category' page 2. Enter a valid Name 3. Enter a valid Description 4. Click 'Submit'
Test Data	Category: Health Assistance Description: Provides help with medical appointments, prescription pick-ups, and healthcare guidance.
Expected Results	The category is created and the system displays 'Category created Successfully'.
Actual Results	The category is created and the system displays 'Category created Successfully'.
Pass/Fail	Pass.
Remarks	The new category is created and is confirmed by displaying an alert: "Category created successfully"

Test Case ID	PM-2
Test Case Description	View all existing Categories as a Platform Administrator.
Precondition	Platform Administrator must be logged in with at least one existing category in the system.
Created by:	Roshitha
Test Steps	1. Click on the 'Platform Management' page 2. Navigate to the 'Manage Category' page 3. Observe the list of existing categories
Test Data	-
Expected Results	The 'Platform Management' page displays all categories existing in the system.
Actual Results	The 'Platform Management' page displays all categories existing in the system.
Pass/Fail	Pass
Remarks	The list of categories can be managed on this page.

Test Case ID	PM-3
Test Case Description	Update an existing Category as a Platform Administrator.
Precondition	Platform Administrator must be logged in with at least one existing category in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Manage Category' page 2. Click 'Edit' beside an existing category 3. Change the 'Name' to new valid values 4. Change the 'Description' to new valid values 5. Click Save
Test Data	Name: Health Assist Description: Provides help with medical appointments and related
Expected Results	The system updates the existing category and highlights the affected row
Actual Results	The system updates the existing category and highlights the affected row
Pass/Fail	Pass
Remarks	The existing category is edited and rearranged in alphabetical order.

Test Case ID	PM-4-1
Test Case Description	Delete an existing Category successfully as a Platform Administrator.
Precondition	Platform Administrator must be logged in with at least one existing category in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Manage Category' page 2. Locate the target category 3. Click 'Archive' beside the category 4. Click confirm
Test Data	Category: Health Assist
Expected Results	The category's Status updates to 'Archived' and the Archive modal is replaced with the Restore modal. The selected category is successfully deleted (soft-delete) and marked as archived. The affected row is highlighted green to confirm successful soft deletion.
Actual Results	The category's Status updates to 'Archived' and the Archive modal is replaced with the Restore modal. The selected category is successfully deleted (soft-delete) and marked as archived. The affected row is highlighted green to confirm successful soft-deletion.

Pass/Fail	Pass
Remarks	When the existing category is archived, it prompts a confirmation modal. If confirmed, the category is archived and toggles a 'restore' option.

Test Case ID	PM-4-2
Test Case Description	Restore a previously archived Category as a Platform Administrator.
Precondition	Platform Administrator is logged in with at least one archived category.
Created by:	Roshitha
Test Steps	1. Click on 'Manage Category' page 2. Locate the archived category 3. Click 'Restore'
Test Data	Health Assist
Expected Results	The system restores the archived category upon confirmation, updates its status to 'Active', and replaces the Restore modal with the Archive modal. The card highlights green to confirm successful restore.
Actual Results	The system restores the archived category upon confirmation, updates its status to 'Active', and replaces the Restore modal with the Archive modal. The card highlights green to confirm successful restore.
Pass/Fail	Pass
Remarks	The archived category is restored(with a confirmation modal), which toggles the 'restore' option to 'archive'.

Test Case ID	PM-6
Test Case Description	Search for a Category by name as a Platform Administrator.
Precondition	Platform Administrator must be logged in with at least one category in the system.
Created by:	Roshitha
Test Steps	1. Open 'Category Management' page 2. Enter a category keyword into the Search bar 3. Click 'Search'
Test Data	Keyword: Health
Expected Results	The 'Category Management' page displays categories filtered according to the entered search keyword.

Actual Results	The search result filters and displays the 'Health' related categories.
Pass/Fail	Pass
Remarks	Any categories related to the search request keyword: 'Health' are fetched and returned as results.

Test Case ID	PM-7
Test Case Description	Log in successfully as a Platform Administrator.
Precondition	Valid credentials for the Platform Administrator exist in the system.
Created by:	Roshitha
Test Steps	1. Click the 'Login' page 2. Enter a valid Username and Password 3. Click 'Login'
Test Data	Login ID: LucasHayes Password: LucasHayes
Expected Results	The system redirects the user to the 'Platform Dashboard' upon successful login.
Actual Results	The system redirects the user to the 'Platform Dashboard' upon successful login.
Pass/Fail	Pass.
Remarks	Automatically redirected to the PM dashboard according to the user role.

Test Case ID	PM-8
Test Case Description	Log out from the Platform Dashboard.
Precondition	The user must be logged in as Platform Administrator.
Created by:	Roshitha
Test Steps	1. Click the 'Log Out' button 2. Confirm logout
Test Data	-
Expected Results	The system displays a logout confirmation modal, and once confirmed, it terminates the current session and redirects the user to the 'Login' page.
Actual Results	The system displays a logout confirmation modal, and once confirmed, it terminates the current session and redirects the user to the 'Login' page.

Pass/Fail	Pass
Remarks	The 'logout' modal pops up for confirmation. Once confirmed, the user is logged out of the system and redirected back to the login page.

Sprint 3

Sprint 3 25th October 2025 – 31st October 2025
Duration:

Location: Online call (Discord)

Date: 25th October 2025 (25/10/2025)

Time: 12:00PM – 01:00PM

Attendance: 6/6

Name	UOW ID
Team Member	<REDACTED>
Team Member	<REDACTED>
Team Member	<REDACTED>
Team Member	<REDACTED>
Roshitha	<REDACTED>
Team Member	<REDACTED>

Agenda items

1. **Complete any remaining user stories** and finalize their corresponding **Boundary–Control–Entity (BCE)** and **Sequence Diagrams** to ensure all design documentation is up to date.
2. **Review and update existing test cases** in line with ongoing **Test-Driven Development (TDD)** practices to maintain testing consistency and quality.
3. **Clarify outstanding project matters** with **Mr. Terence** during the upcoming tutorial session on **31 October 2025**, to confirm expectations for the final sprint and deliverables.

Entity Relational Diagram - Finalized

13. CSR Representative – Search Requests

As a CSR Representative, I want to search for requests made by PIN's so that I can identify opportunities relevant to volunteers.

Use Case Diagram Taiga ID# 13

Use Case Description Taiga ID# 13

Name: CSR Representative – Search Requests

Stakeholders and goals:

CSR Representative - want to search for requests made by PIN's to identify opportunities relevant to volunteers.

Description:

The CSR Representative uses the search function to locate specific service request(s) based on criteria such as

`Title`, **`Created by`** (the PIN who created the request), **`Location`**, **`Description`**

and additional filtering options such as:

`Service` (categories dropdown), **`From`** <date range>, **`To`** <date range>, and

`Status` (ALL | ACTIVE | CANCELLED | COMPLETED)

**Note: From (Date) - To (Date) filter checks for date created, date completed (if available, if not assume it is still ongoing). If From is selected without To, it is assumed From <date selected> - To <current date>. If To is selected without From, it is assumed From <the first request ever created> - To <date selected>.*

The system retrieves and displays matching results, allowing the CSR Representative to efficiently identify, review, and manage the relevant request(s).

Actors: CSR Representative

Pre-condition(s): CSR Representative is logged in.
CSR Representative navigates to 'Manage Request' page.

Trigger: CSR Representative wants to search for a request

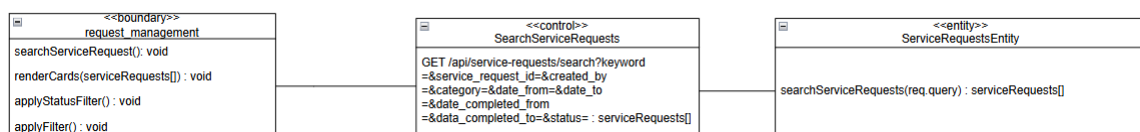

Normal flow:

1. CSR Representative enters one of the search criteria(s) (e.g., Name, Description).
2. System retrieves and displays all request(s) matching the search criteria.
3. CSR Representative reviews the search results and may select a request for further actions (e.g., view, save)

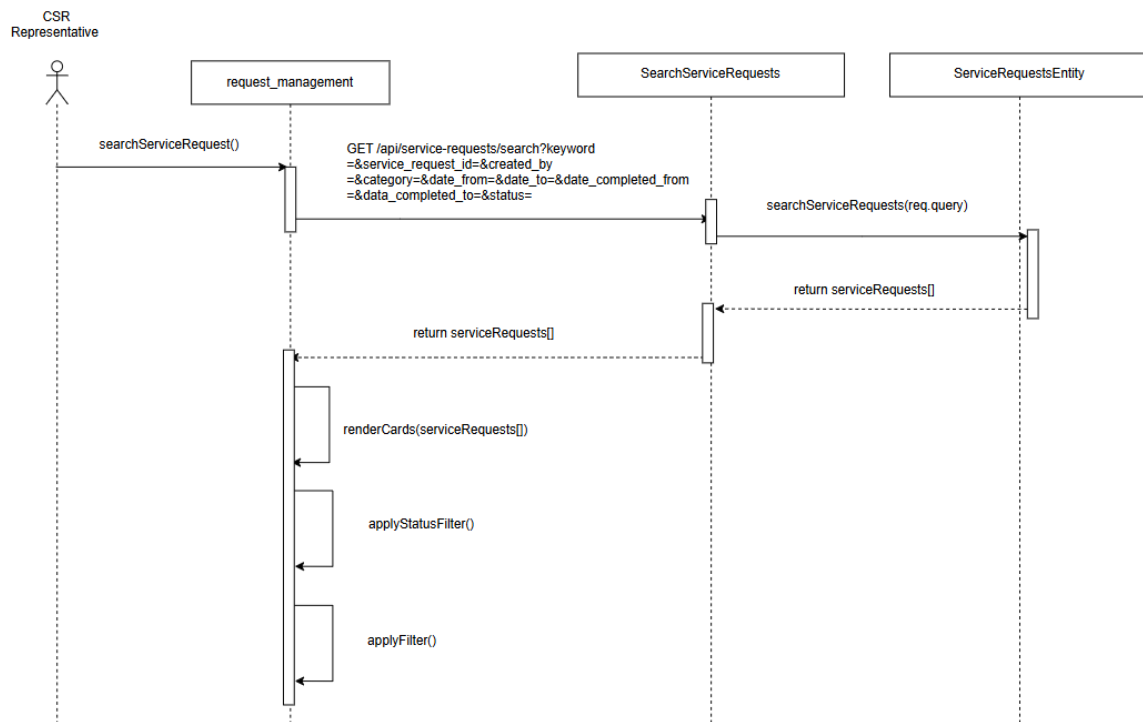

Sub-flows: None

Alternative/Exceptional Flows: None

14. CSR Representative – View Requests

As a CSR Representative, I want to view requests made by PIN's so that I can review the details of their requests before making decisions.

Use Case Diagram Taiga ID# 14

Use Case Description Taiga ID# 14

Name: CSR Representative – View Requests

Stakeholders and goals:

CSR Representative - wants to view requests made by PIN's to review the details of their requests before making decisions.

Description:

The CSR Representative accesses the list of service requests submitted by PINs to review their details. The system displays all relevant requests with information such as:

`Title of Request`, `Created By` (PIN who created the request), `Location`, `Description`, `Date Created`, `Date Completed` (“—” if still ongoing), and `Status` (ACTIVE | CANCELLED | COMPLETED)

and allows the CSR Representative to View (expand) the request, for more details such as the contact information of the PIN.

Actors: CSR Representative

Pre-condition(s): CSR Representative is logged in.

Trigger: CSR Representative decides to view service requests

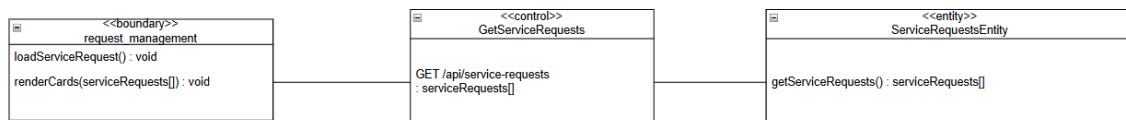

Normal flow:

1. CSR Representative navigate to “Manage Requests” page
2. System displays a list of existing categories.

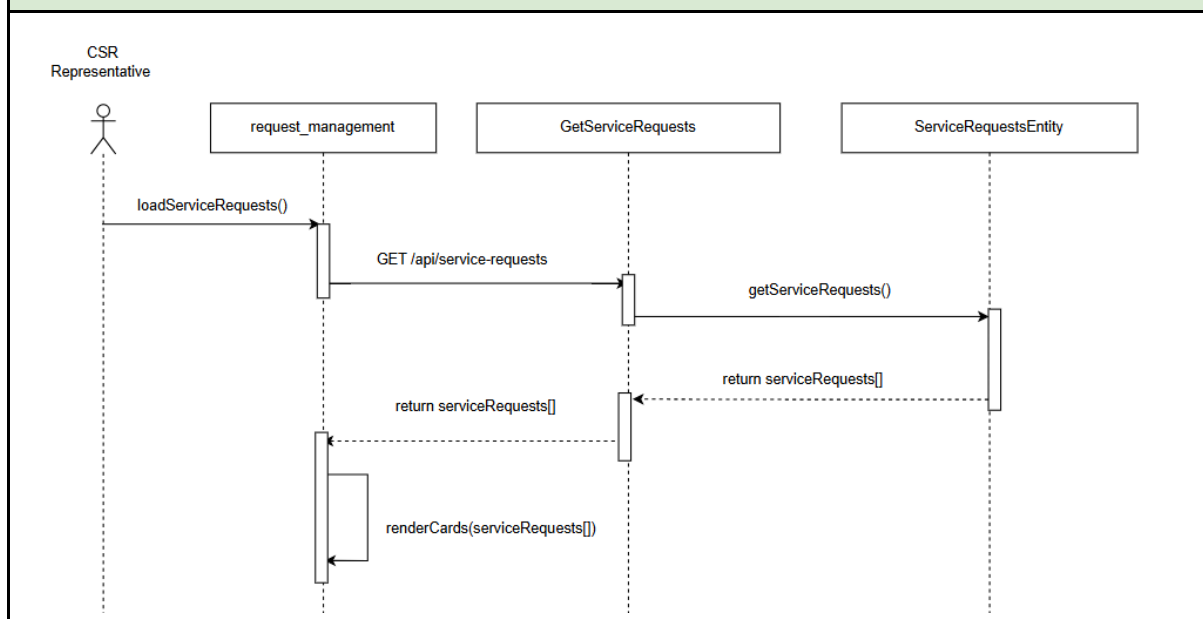

Sub-flows: None

Alternative/Exceptional Flows: None

15. CSR Representative – Save Requests

As a CSR Representative, I want to save certain requests into a shortlist so that I can manage and revisit potential opportunities.

Use Case Diagram Taiga ID# 15

Use Case Description Taiga ID# 15

Name: CSR Representative – Save Requests

Stakeholders and goals:

CSR Representative - want to save certain requests into a shortlist to manage and revisit potential opportunities.

Description:

The CSR Representative reviews available service requests and saves selected ones into a shortlist for easier access and future reference. The shortlisted request card briefly highlights green to confirm successful shortlist and the system stores shortlisted requests under the CSR Representative's account for later retrieval.

Actors: CSR Representative

Pre-condition(s):

- CSR Representative is logged in.
- CSR Representative navigate to "Manage Requests" page

Trigger: CSR Representative decides to shortlist a request

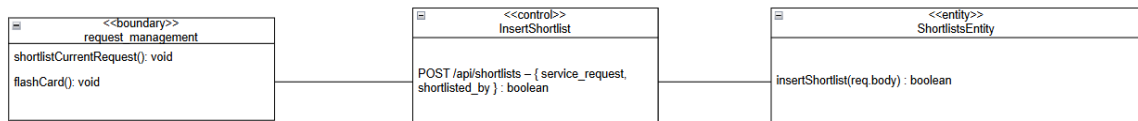

Normal flow:

1. CSR Representative clicks on the selected request.
2. CSR Representative clicks on the “Shortlist” button.
3. System highlights the shortlisted request card to confirm successful shortlisting of request (the CSR Representative can view shortlisted requests in another page).

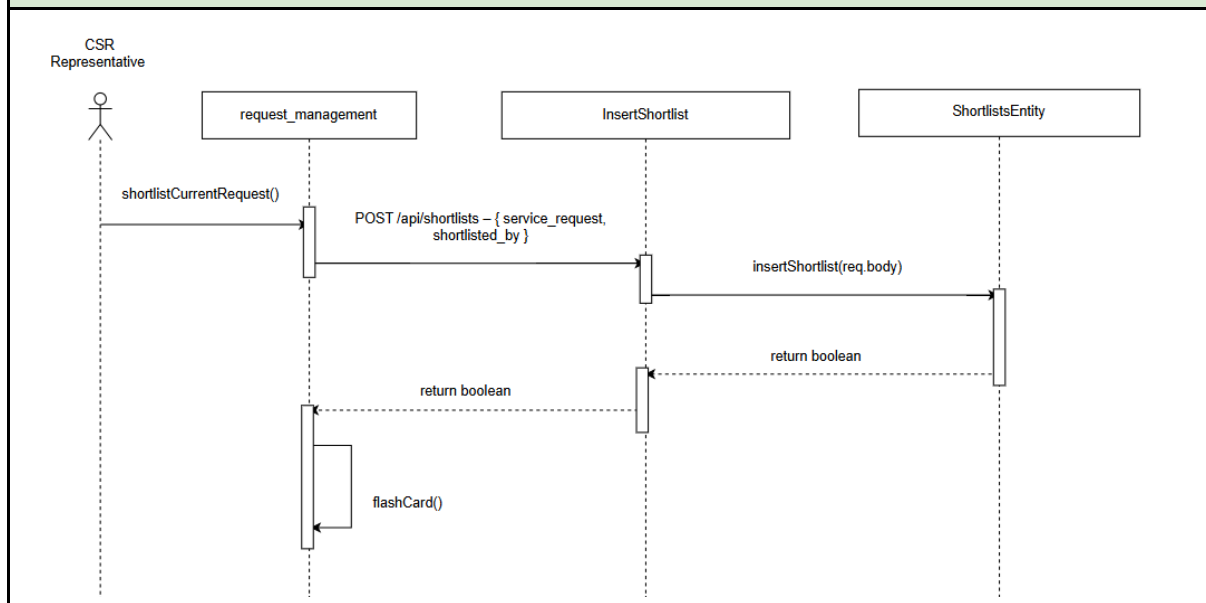

Sub-flows: None

Alternative/Exceptional Flows: None

16. CSR Representative – Search Shortlisted Requests

As a CSR Representative, I want to search my shortlisted requests so that I can easily locate specific opportunities that I have shortlisted.

Use Case Diagram Taiga ID# 16

Use Case Description Taiga ID# 16

Name: CSR Representative – Search Shortlisted Requests

Stakeholders and goals:

CSR Representative - want to search my shortlisted requests to easily locate specific opportunities that I have shortlisted.

Description:

The CSR Representative searches through their personal shortlist of service requests submitted by PINs to quickly locate specific opportunities. The system allows filtering or searching by criteria such as:

`Title`, **`Created by`** (the PIN who created the request), **`Location`**, **`Description`**

and additional filtering options such as:

`Service` (categories dropdown), **`From`** <date range>, **`To`** <date range>, and **`Status`** (ALL | ACTIVE | CANCELLED | COMPLETED)

**Note: From (Date) - To (Date) filter checks for date created, date completed (if available, if not assume it is still ongoing). If From is selected without To, it is assumed From <date selected> - To <current date>. If To is selected without From, it is assumed From <the first request ever created> - To <date selected>.*

Actors: CSR Representative

Pre-condition(s):

- CSR Representative is logged in.
- CSR Representative navigate to “Shortlisted Requests” page

Trigger: CSR Representative decides to search shortlisted request

Normal flow:

1. CSR Representative enters one of the search criteria (e.g., Name, Description).
2. System retrieves and displays all request(s) matching the search criteria.
3. CSR Representative reviews the search results and may select a request for further actions (e.g., view)

17. CSR Representative – View Shortlisted Requests

As a CSR Representative, I want to view my shortlisted requests so that I can evaluate and prioritize follow-up actions.

Use Case Diagram Taiga ID# 17

Use Case Description Taiga ID# 17

Name: CSR Representative - View Shortlisted Requests

Stakeholders and goals:

CSR Representative - want to view my shortlisted requests to evaluate and prioritize follow-up actions.

Description:

The CSR Representative accesses their personal shortlist of service requests submitted by PINs. This allows the CSR Representative to efficiently evaluate and prioritize follow-up actions for potential opportunities. The system displays all relevant requests with information (similar to view service requests except within their shortlists) such as:

`Title of Request`, `Created By` (PIN who created the request), `Location`, `Description`, `Date Created`, `Date Completed` (“—” if still ongoing), and `Status` (ACTIVE | CANCELLED | COMPLETED)

and allows the CSR Representative to View (expand) the request, for more details such as the contact information of the PIN.

Actors: CSR Representative

Pre-condition(s):

- CSR Representative is logged in.

Trigger: CSR Representative decides to view shortlisted requests

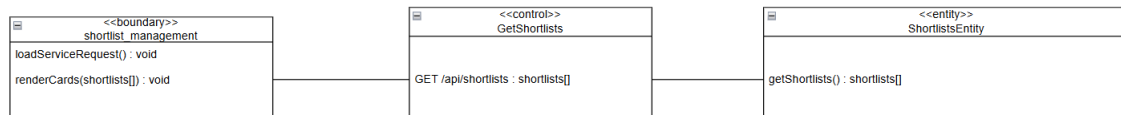

Normal flow:

1. CSR Representative navigate to “Shortlisted Requests” page
2. System displays the CSR Representative’s specific list of shortlisted requests..

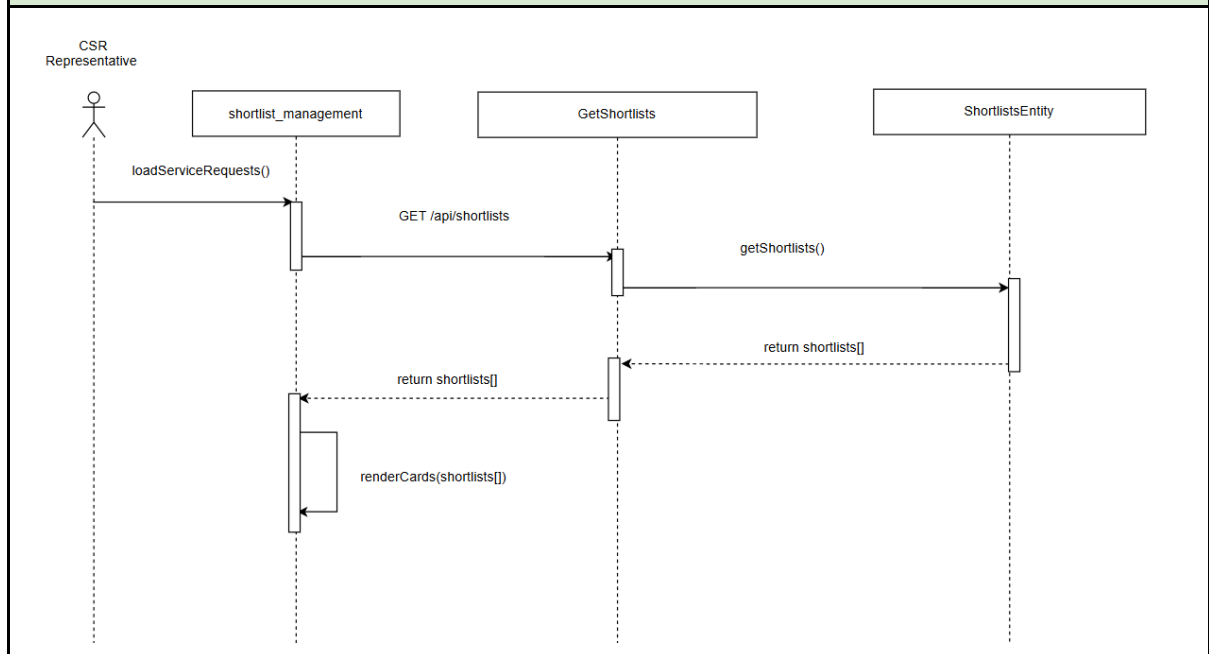

Sub-flows: None

Alternative/Exceptional Flows: None

18. CSR Representative – Search Completed Match History

As a CSR Representative, I want to search my history of completed matches so that I can view a specific match.

Use Case Diagram Taiga ID# 18

Use Case Description Taiga ID# 18

Name: CSR Representative - Search Completed Match History

Stakeholders and goals:

CSR Representative - want to search my history of completed matches to view a specific match.

Description:

The CSR Representative searches through their past completed matches to locate a specific match and review its details. The system allows searching or filtering by criteria such as:

`Title`, **`Created by`** (the PIN who created the request), **`Location`**, **`Description`**

and additional filtering options such as:

`Service` (categories dropdown), **`From`** <date range>, and **`To`** <date range>

`Status` (ALL | ACTIVE | CANCELLED | COMPLETED) - for this case it will be COMPLETED since CSR Representative is searching completed match history.

**Note: From (Date) - To (Date) filter checks for date created, date completed (if available, if not assume it is still ongoing). If From is selected without To, it is assumed From <date selected> - To <current date>. If To is selected without From, it is assumed From <the first request ever created> - To <date selected>.*

This helps the CSR Representative quickly access historical matches for review, reporting, or follow-up purposes.

Actors: CSR Representative

Pre-condition(s):

- CSR Representative is logged in.
- CSR Representative navigates to the “Manage Requests” page.
- CSR Representative selects the “Completed” filter.

Trigger: CSR Representative decides to search completed match history

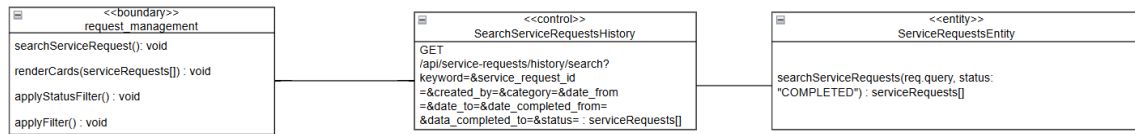

Normal flow:

1. CSR Representative selects the “Completed” filter.
2. CSR Representative enters one of the search criteria(s) (e.g., Name, Description, Date range, etc...)
3. System retrieves and displays all request(s) matching the search criteria(s).
4. CSR Representative reviews the search results and may select a request for further actions (e.g., view - for more detailed information)

20. CSR Representative – Log In

As a CSR Representative, I want to log in so that I can securely access the system.

Use Case Description Taiga ID# 20
Name: CSR Representative – Log In
Stakeholders and goals: CSR Representative - wants to access their account
Description: This allows the CSR Representative to log in to the website by providing their credentials: Login ID / Email and Password, allowing the CSR Representative to authenticate and gain access to the system's protected features.
Actors: CSR Representative
Pre-condition(s): - CSR Representative has a valid user account. - CSR Representative's Account / Profile is not Suspended.
Trigger: CSR Representative decides to log in.
Normal flow: 1. CSR Representative enters (Login ID / Email) + Password.

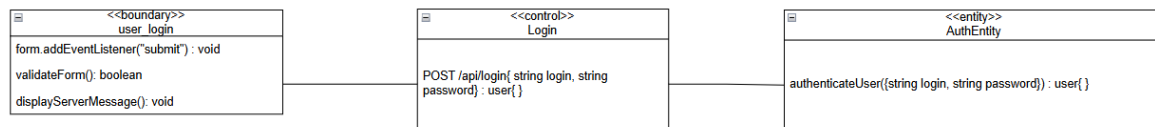

2. CSR Representative submits the form.
3. System validates login credentials.
4. System authenticates and authorizes, redirecting to CSR Representative Dashboard.

Sub-flows: None

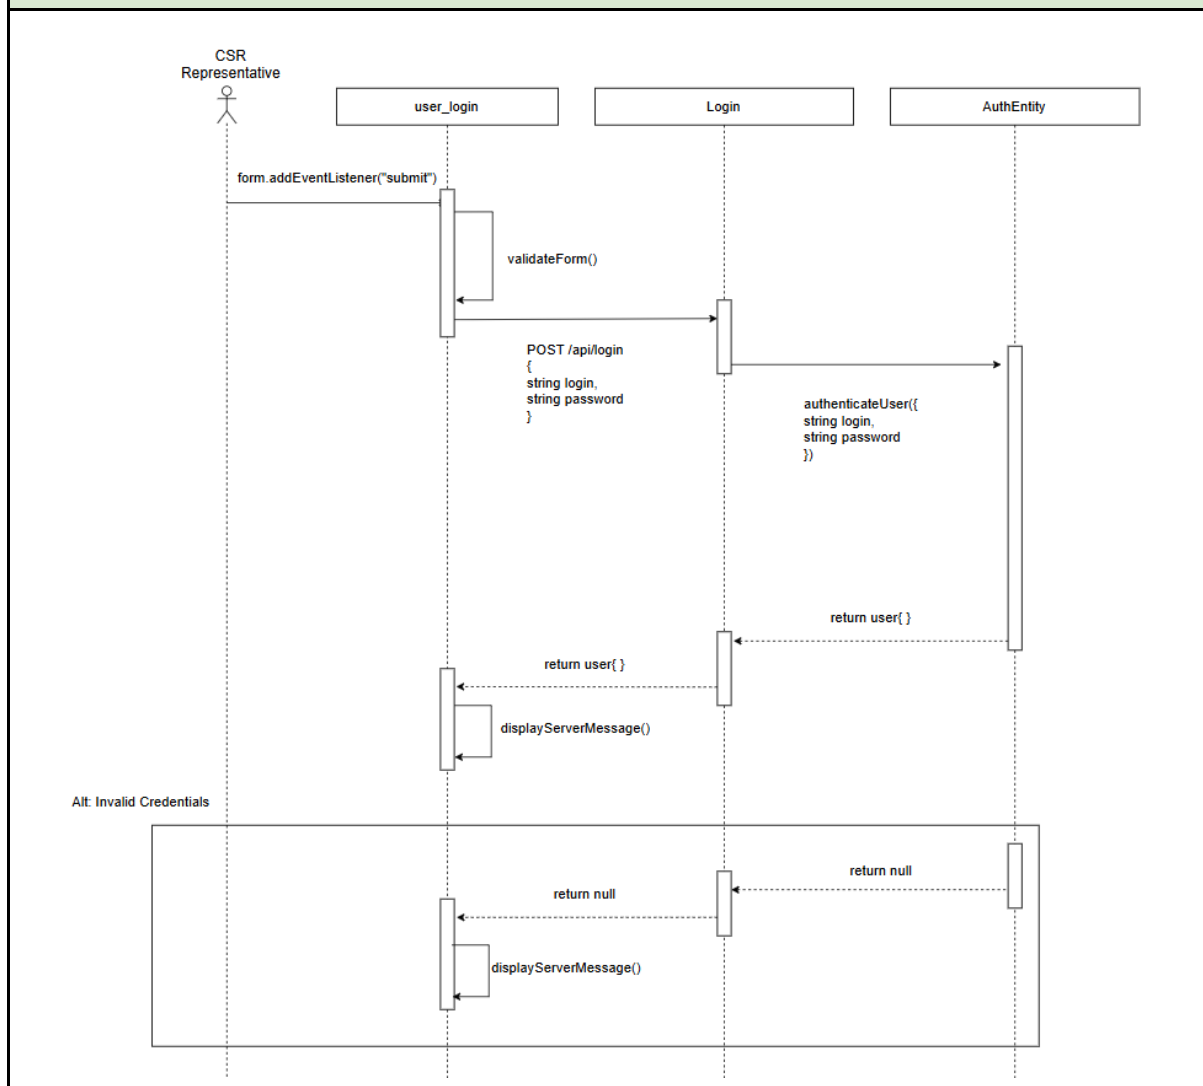

Alternative/Exceptional Flows:

3a. [Invalid Credentials]: System displays error message.

21. CSR Representative – Log Out

As a CSR Representative, I want to log out so that I can ensure my account remains secure when not in use.

Use Case Diagram Taiga ID# 21

Use Case Description Taiga ID# 21

Name: CSR Representative – Log Out

Stakeholders and goals:

CSR Representative – wants to log out securely to prevent unauthorized

Description:

This allows the CSR Representative to securely end their active session in the system. When the CSR Representative selects the “Log out” function, the system terminates the current session and returns the user to the login screen or home page, preventing further access until they log in again.

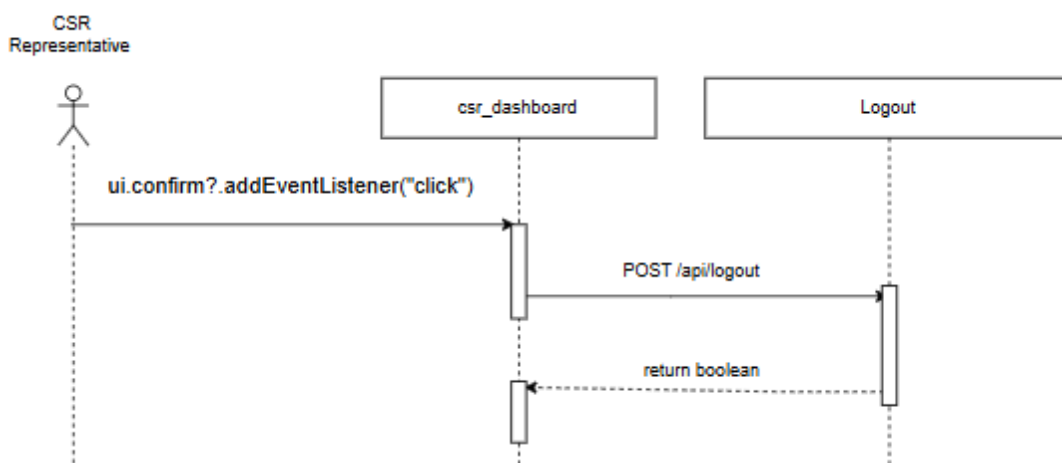

Actors: CSR Representative

Pre-condition(s): CSR Representative is logged in.

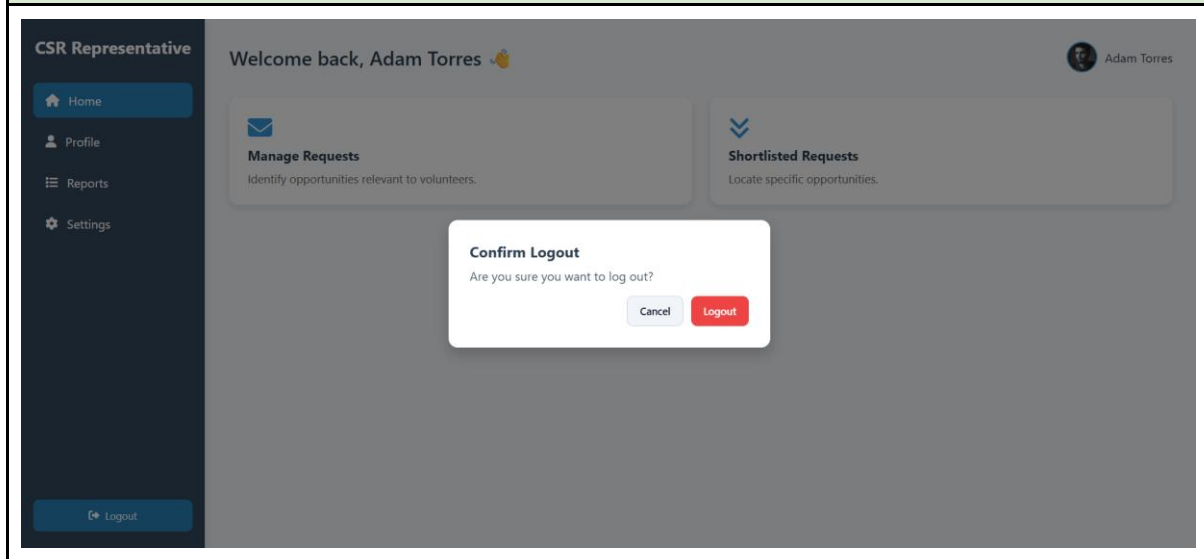

Trigger: CSR Representative decides to log out.

Normal flow:

1. CSR Representative clicks on the “Log out” button.
2. The system prompts a confirmation if the CSR Representative would like to log out.
3. The system terminates the current session.
4. System redirects the CSR Representative to the Login page.

Use Case Diagram Taiga ID# 27

Use Case Description Taiga ID# 27

Name: PIN - View Number of Views

Stakeholders and goals:

PIN - want to see the number of views for my request to understand the level of interest and visibility my request has received.

Description:

The PIN user can view the total number of times their submitted service request has been accessed or viewed by CSR Representatives. This information helps the PIN gauge interest and engagement with their request.

Actors: Person-In-Need (PIN)

Pre-condition(s): PIN is logged in.

Trigger: PIN decides to see the number of views for a request

Normal flow:

1. PIN navigates to “Manage Service Request” page
2. System displays a list of service request(s) made by the PIN.
3. System displays the total number of views for the selected request (Eye Icon).

29. PIN – Search Completed Match History

As a PIN, I want to search my history of completed matches so that I can find and review details of a specific match when needed.

Use Case Diagram Taiga ID# 29

Use Case Description Taiga ID# 29

Name: PIN - Search Completed Match History

Stakeholders and goals:

PIN, I want to search my history of completed matches so that I can find and review details of a specific match when needed.

Description:

The PIN user searches through their past completed matches to locate a specific match and review its details. The system allows searching by criteria(s) such as:

`Title`, **`Category`**, **`Description`**, **`Date Created`**, **`Date Completed`** and **`Matched By`** (the CSR Representative who matched the PIN's request).

The system also provides additional filtering options such as:

`Service` (Categories dropdown), **`From`** <date_range> and **`To`** <date_range>

`Status` (ALL | ACTIVE | CANCELLED | COMPLETED) - for this case since the PIN is searching completed match history, the status will be COMPLETED.

**Note: From (Date) - To (Date) filter checks for date created, date completed (if available, if not assume it is still ongoing). If From is selected without To, it is assumed From <date selected> - To <current date>. If To is selected without From, it is assumed From <the first request ever created> - To <date selected>.*

This enables the PIN to efficiently access historical information for reference or follow-up.

Actors: Person-In-Need (PIN)

Pre-condition(s):

- PIN is logged in.
- PIN navigates to the “Manage Service Requests” page
- PIN selects the “Completed” filter.

Trigger: PIN decides to search completed match history

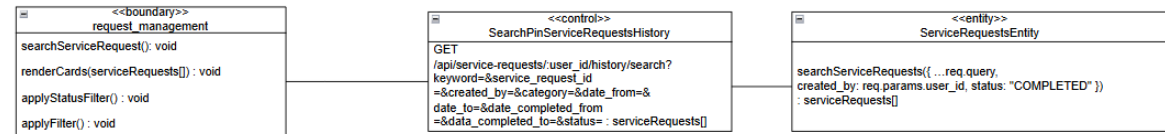

Normal flow:

1. PIN enters one of the search criteria(s) (e.g., Title, Description, Matched By).
2. System retrieves and displays all completed matches matching the search criteria.
3. PIN reviews the search results and may select a completed match for further actions (e.g., edit / cancel).

End of Sprint 3

End of Sprint 3 Summary:

- Continued progress on the **remaining user stories** and completed the corresponding **BCE and Sequence Diagrams**, ensuring all core functionalities were properly documented.
- Updated and refined test cases in alignment with the Test-Driven Development (TDD) approach discussed in the previous sprint.
- Clarified project requirements and expectations with Mr. Terence during the tutorial session on 31st October 2025, providing greater clarity for the final implementation and documentation phase.

Next Sprint Focus:

- Conduct major system testing to verify functionality, integration and performance.
- Perform a comprehensive review of all diagrams (BCE, Sequence, Class, Entity) to ensure accuracy and consistency.
- Record and edit the video demonstration showcasing the final completed product.
- Finalize and submit the project report for assignment.

Test Cases for Sprint 3

Test Case ID	CSR-1
Test Case Description	Search Requests by keyword as Community Service Representative.
Precondition	Community Service Representative is logged in with existing Person-In-Need requests in the system.
Created by:	Roshitha
Test Steps	1. Click 'Manage Requests' page 2. Enter keyword in 'Search' 3. Confirm Search 4. Observe filtered list
Test Data	Search: Health
Expected Results	The 'Manage Service Requests' page displays all filtered service requests according to the entered search keyword.
Actual Results	The 'Manage Service Requests' page displays all filtered service requests according to the entered search keyword.
Pass/Fail	Pass
Remarks	Any requests related with the keyword: 'Health' are fetched and returned as results.

Test Case ID	CSR-2
Test Case Description	Save Requests as Community Service Representative.
Precondition	Community Service Representative is logged in with existing Person-In-Need requests in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Manage Requests' Page 2. Select a request 3. Click on the 'Shortlist' button 4. Confirm the shortlist
Test Data	Target: Food
Expected Results	The system shortlists the request and the shortlist button is highlighted briefly.
Actual Results	The system shortlists the request and the shortlist button is highlighted briefly.
Pass/Fail	Pass
Remarks	The shortlist button is highlighted

Test Case ID	CSR-3
Test Case Description	Search Shortlisted Requests as Community Service Representative.
Precondition	Community Service Representative is logged in with existing Person-In-Need requests in the system.
Created by:	Roshitha
Test Steps	1. Click the 'Shortlisted Requests' page 2. Enter keyword in 'Search' 3. Confirm Search 4. Observe filtered list
Test Data	Keyword: Food
Expected Results	The 'Shortlisted Requests' page displays all filtered service requests according to the entered search keyword.
Actual Results	The 'Shortlisted Requests' page displays all filtered service requests according to the entered search keyword..
Pass/Fail	Pass
Remarks	Any requests related with the keyword: 'Food' are fetched and returned as results.

Test Case ID	CSR-4
Test Case Description	View Shortlisted Requests as Community Service Representative.
Precondition	Community Service Representative is logged in with existing Person-In-Need requests in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Shortlisted Requests' page 2. Observe the list of existing shortlisted requests
Test Data	-
Expected Results	The 'Shortlisted Requests' page displays all service requests sorted by the most recent date.
Actual Results	The 'Shortlisted Requests' page displays all service requests sorted by the most recent date.
Pass/Fail	Pass
Remarks	Shortlisted requests are displayed in order from recent dates.

Test Case ID	CSR-5
Test Case Description	Search Completed Match History as Community Service Representative.
Precondition	Community Service Representative is logged in with existing completed match requests in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Manage Requests' page 2. Click on 'Completed Matches' Tab 3. Search keyword 4. Confirm search
Test Data	Keyword: Food
Expected Results	The 'Completed Matches' page displays all completed matches according to the entered search keyword.
Actual Results	The 'Completed Matches' page displays all completed matches according to the entered search keyword.
Pass/Fail	Pass
Remarks	Any completed requests related with the keyword: 'Food' are fetched and returned as results.

Test Case ID	CSR-6
Test Case Description	View Completed Match History as Community Service Representative.
Precondition	Community Service Representative is logged in with existing completed match requests in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Manage Requests' page 2. Click on 'Completed Matches' Tab 3. Observe list of completed matches
Test Data	-
Expected Results	The system displays all completed requests sorted by the most recent date.
Actual Results	The system displays all completed requests sorted by the most recent date.
Pass/Fail	Pass
Remarks	Completed requests are displayed in order beginning with recent dates.

Test Case ID	CSR-7
Test Case Description	Log In as Community Service Representative.
Precondition	Community Service Representative is logged in.
Created by:	Roshitha
Test Steps	1. Enter valid credentials into the 'Log In' page 2. Click 'Confirm'
Test Data	Login ID: NoahTurner Password: NoahTurner
Expected Results	The system successfully logs in and redirects to 'CSR Representative Dashboard'.
Actual Results	The system successfully logs in and redirects to 'CSR Representative Dashboard'.
Pass/Fail	Pass.
Remarks	Automatically redirected to the CSR Dashboard according to the user role.

Test Case ID	CSR-8
Test Case Description	Log Out as Community Service Representative.
Precondition	Community Service Representative is logged in.
Created by:	Roshitha
Test Steps	3. Click on the 'Log Out' button 4. Confirm log out
Test Data	-
Expected Results	The system successfully logs out upon confirmation and redirects to the 'Login' page. The system terminates the current session.
Actual Results	The system successfully logs out upon confirmation and redirects to the 'Login' page. The system terminates the current session.
Pass/Fail	Pass
Remarks	The 'logout' modal pops up for confirmation. Once confirmed, the user is logged out of the system and redirected back to the login page.

Test Case ID	PIN-9
Test Case Description	View Number of Views as Person-In-Need.
Precondition	Person-In-Need is logged in with existing requests in the system and views.
Created by:	Roshitha
Test Steps	1. Click on 'Manage Service Request'. 2. Select a request from the list displayed. 3. Observe the total number count for requests made
Test Data	Target: Food Support
Expected Results	The system displays a list of service requests made by the user, showing the total number of views for each request through the Eye icon.
Actual Results	The system displays a list of service requests made by the user, showing the total number of views for each request through the Eye icon.
Pass/Fail	Pass
Remarks	The PIN can see how many times the service request was viewed.

Test Case ID	PIN-10
Test Case Description	View Number of Times Request Shortlisted as Person-In-Need.
Precondition	Person-In-Need is logged in with existing shortlisted requests in the system and views.
Created by:	Roshitha
Test Steps	1. Click on 'Manage Service Request'. 2. Select a request from the list displayed. 3. Observe the total number count for requests made
Test Data	Target: Food Donation Help
Expected Results	The system displays the total number of times each service request has been shortlisted.
Actual Results	The system displays the total number of times each service request has been shortlisted.
Pass/Fail	Pass
Remarks	The PIN can see if the submitted request is shortlisted.

Test Case ID	PIN-11
Test Case Description	Search Completed Match History as Person-In-Need.
Precondition	Person-In-Need is logged in with existing completed match requests in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Manage Service Requests' page 2. Click on 'Completed Match History' Tab 3. Search keyword 4. Confirm search
Test Data	Keyword: Food support
Expected Results	The 'Completed Match History' page displays all completed matches according to the entered search keyword.
Actual Results	The 'Completed Match History' page displays all completed matches according to the entered search keyword.
Pass/Fail	Pass
Remarks	The service request was matched, therefore it is on the completed tab.

Test Case ID	PIN-12
Test Case Description	View Completed Match History as Person-In-Need.
Precondition	Community Service Representative is logged in with existing completed match requests in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Manage Requests' page 2. Click on 'Completed Match History' Tab 3. Observe list of completed matches
Test Data	-
Expected Results	The system displays all completed/matched requests.
Actual Results	The system displays all completed/matched requests.
Pass/Fail	Pass
Remarks	The system indeed displays all the completed service requests.

Test Case ID	PM-9
Test Case Description	Create Daily Reports as Platform Administrator.
Precondition	Platform Administrator is logged in with existing completed match requests in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Platform Management' page 2. Click on 'Daily' under 'Generate Report' 3. Confirm action
Test Data	-
Expected Results	The system successfully creates the Daily Report. The system creates a report that summarises the activity overview and platform engagement.
Actual Results	The system successfully creates the 'Daily Report'. The system creates a report that summarises the activity overview and platform engagement.
Pass/Fail	Pass
Remarks	The system creates a report that summarises the activity overview and platform engagement from the selected date.

Test Case ID	PM-10
Test Case Description	Create Weekly Reports as Platform Administrator.
Precondition	Platform Administrator is logged in with existing completed match requests in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Platform Management' page 2. Click on 'Weekly' under generate report 3. Confirm action
Test Data	-
Expected Results	The system successfully creates the 'Weekly Report'. The system creates a report that summarises the activity overview and platform engagement from the selected date.
Actual Results	Weekly reports successfully created.
Pass/Fail	Pass
Remarks	The system creates a report that summarises the activity overview and platform engagement based on the week from the selected date.

Test Case ID	PM-11
Test Case Description	Create Monthly Reports as Platform Administrator.
Precondition	Platform Administrator is logged in with existing completed match requests in the system.
Created by:	Roshitha
Test Steps	1. Click on 'Platform Management' page 2. Click on 'Monthly' for generate report 3. Confirm action
Test Data	-
Expected Results	The system successfully creates the 'Monthly Report'. The system creates a report that summarises the activity overview and platform engagement.
Actual Results	The system successfully creates the 'Monthly Report'. The system creates a report that summarises the activity overview and platform engagement.
Pass/Fail	Pass
Remarks	The system creates a report that summarises the activity overview and platform engagement based on the month from the selected date.

Sprint 4

Sprint 4 1st November 2025 – 13th November 2025
Duration:

Location: Online call (Discord)

Date: 1st November 2025 (1/11/2025)

Time: 12:00PM – 01:00PM

Attendance: 6/6

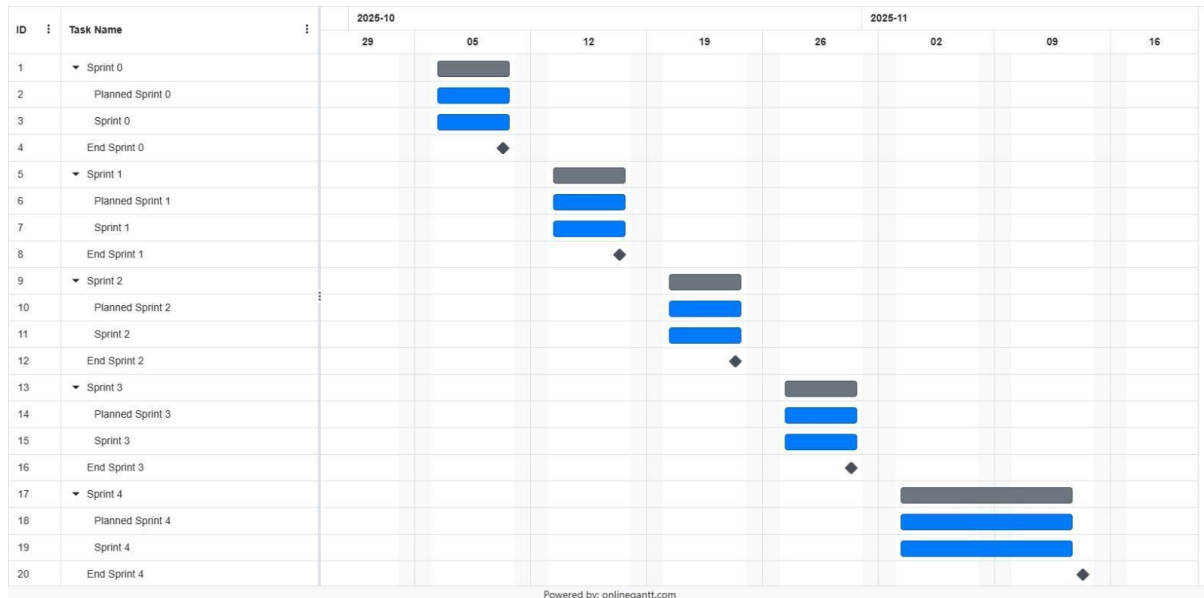

Name	UOW ID
Team Member	<REDACTED>
Team Member	<REDACTED>
Team Member	<REDACTED>
Team Member	<REDACTED>
Roshitha	<REDACTED>
Team Member	<REDACTED>

Agenda items (Final Sprint)

1. **Conduct comprehensive system testing** to validate functionality, performance, and integration across all pages.
2. **Review and verify all system diagrams** – including **BCE**, **Sequence**, **Class**, and **Entity Diagrams** – to ensure accuracy and completeness.
3. **Record and edit the finalized video demonstration** showcasing the system's key features and workflows.
4. **Finalize and submit the project report**, ensuring all documentation and deliverables meet submission requirements.

5. **Update seeds** (populate data) for database to 100.

Project Timeline (Gantt Chart)

Database Seeding - Populate Data

Overview

The database seeding process was implemented to automatically populate the system with meaningful, structured, and randomized data for development and testing. It ensures that each reseed produces a **fresh yet realistic dataset**, covering all major entities such as users, profiles, service requests, shortlists, and matches.

This process consists of two key components:

- [seeds.js](#) - defines the base data used for seeding
- `seed_db.js` - executes the seeding process, generating randomized but logically consistent records in the database.

seeds.js

The seeds.js file serves as the **data source** for the seeding process. It contains predefined arrays of values that reflect realistic use cases in the system:

- **Users:**

A list of sample names (e.g., *Liam Carter*, *Olivia Bennett*, *Noah Turner*).

These names form the basis for generating user accounts with derived attributes such as emails, usernames, and passwords.

- **Categories:**

Defines fixed service categories (e.g., *Food Support*, *Transportation*, *Elderly Care*) along with descriptive details explaining the purpose of each category.

These serve as stable reference data that remains constant across reseeds.

- **Service Requests:**

A collection of sample community support scenarios, each containing a **title**, **description**, and **linked category**.

These represent real-world examples that connect directly to the users and categories seeded later.

This file ensures all data seeded into the database is **meaningful, human-readable, and contextually appropriate**.

seed_db.js

The seed_db.js script **resets** and **repopulates** the database using the base datasets from seeds.js, adding controlled randomness so each reseed yields a **fresh, valid, and test-ready** dataset.

Process Summary

1. Database Reset

All core tables—users, user_profiles, categories, service_requests, shortlists, and matches—are cleared with

TRUNCATE TABLE ... RESTART IDENTITY CASCADE, removing prior data and resetting identity sequences.

2. Reference Data Insertion

- Inserts four fixed **user profiles**: *User Admin*, *Person-In-Need*, *CSR Representative*, *Platform Management*.
- Inserts all **categories** from seeds.js as stable reference rows.

3. User Generation

For each name in the users array, a user is created with:

- **Profile assignment** (probabilistic, with *Person-In-Need* most common; *CSR* and *Platform Management* smaller shares; a few *User Admin*).
- **Derived attributes**:
 - Email (e.g., Liam_Carter@CSR.com)
 - Username (name without spaces)
 - Password (securely hashed via HasherEntity)
 - Phone (random 8-digit number beginning with 9)
 - Date of birth (random between **1950-01-01** and **2005-12-31**)This produces realistic demographic variety for testing.

4. Service Request Seeding

Each entry from serviceRequests is inserted with:

- **created_by**: a random *Person-In-Need* user
- **date_created**: a random date within the **last month**
- **view_count**: 1–10 (random)
- **status**: ACTIVE (initial)

5. Shortlist Generation

For each request, zero or more **shortlists** are created by random *CSR Representatives*:

- A Set prevents duplicate (service_request, shortlisted_by) pairs.
- Shortlist **date_created** is always **on/after** the request's date_created.

6. Match Creation & Completion

Every service request is **matched**:

- A random *CSR Representative* is recorded as **matched_by**.
- The corresponding service_requests row is updated to status: COMPLETED with a valid date_completed ($\geq$ date_created).

7. Transactional Integrity

The entire operation runs inside a **single database transaction**. Any failure triggers a rollback, preserving data integrity.

Characteristics of the Seeding

- **Internal & Automated**: No manual input required; each reseed regenerates IDs, dates, and assignments.
- **Logically Consistent**: Temporal ordering is enforced (no shortlist or match predates its request).
- **Repeatable yet Varied**: Fixed reference data ensures structure; randomized attributes create diversity for robust testing and demos.

CI / CD

Overview

The Continuous Integration (CI) and Continuous Deployment (CD) process implemented in this project ensures that all source code is consistently verified, tested and maintained throughout the development lifecycle.

A local deployment method was adopted to support demonstration and testing. This approach allows the application to be executed instantly while still following structured CI/CD practices using GitHub version control and basic automated validation.

Continuous Integration (CI)

Continuous Integration ensures that the application maintains the quality when code changes are made. The project repository hosted on GitHub is the central platform for collaboration, version tracking and code integration.

About

CSR Matching System developed with agile practices. Includes multiple user roles (Admin, CSR Rep, Person-in-Need, Platform Manager) and features such as service requests, volunteer matching, history tracking, and reporting.

Suggested workflows

CSIT214-CSR-PLATFORM

When updates are committed and pushed to the main branch, GitHub automatically synchronizes and records each code change.

This process ensures that only verified and functional code is merged into the main branch, maintaining the overall stability and reliability of the application.

Continuous Deployment (CD)

The project utilizes a locally hosted deployment, ensuring a controlled and consistent environment for testing and showcasing system functionality.

Conclusion

The CI/CD process implemented in this project focuses on simplicity and practicality. By integrating GitHub for continuous integration and utilising a local deployment, the workflow remains efficient and reliable. This setup ensures consistent version control and smooth collaboration.

Ethical Considerations

Ethical Issues in terms of Process

1. Transparency

As we adhere to the principle of transparency throughout the development of the CSR Matching Platform, our team emphasized open communication, visibility, and collaboration during every sprint. Transparency is essential to building trust among team members and stakeholders, ensuring that all participants understand the project's progress and decisions made.

We adopted the Agile Scrum approach to schedule and review tasks weekly. Each sprint included discussions on progress, challenges, and next steps, which helped to maintain clear and accountable communication. All project decisions and changes were documented in sprint retrospectives and commit histories on GitHub, ensuring traceability and honesty in our development process.

Our goal was to foster a work culture built on trust, integrity, and mutual respect, ensuring that every team member remained informed and involved in ethical decision-making throughout the system's development.

This transparency also extends to the platform itself, where system updates and changes are made visible to relevant users to build mutual trust.

2. Accountability and Fairness

Accountability was maintained by ensuring each team member took ownership of their assigned tasks while also contributing to shared project goals. Roles and responsibilities were distributed according to skill level and learning objectives, allowing for balanced participation and fair contribution across the team.

Decision-making was done collectively during sprint planning sessions to minimize bias and promote equality. When members encountered challenges, others offered support to

maintain progress and fairness. Peer reviews were also conducted before merging code, ensuring that every module met the team's quality and ethical standards.

3. Reliability and Safety

Reliability and safety were key priorities during the system's development. As the platform handles sensitive data and multiple user roles, maintaining a secure and stable environment was essential.

To uphold these values, the team performed multiple rounds of functional and usability testing to identify bugs, prevent system crashes, and ensure smooth operation. Ethical concerns can arise if flaws remain unaddressed; therefore, prompt issue mitigation was practiced protecting users' trust and ensure long-term reliability.

The system ensures accurate data handling and prevents unauthorized access through proper validation and testing procedures. It promotes system reliability by ensuring that updates and information are handled consistently.

Updated requests or changes made by administrators are reflected for the affected users, ensuring transparency and accountability across all roles.

In addition, potential risks were continuously reviewed during sprint retrospectives, and proactive measures were applied to maintain both software quality and user safety throughout the development process.

Ethical Issues in terms of Product

1. Data Privacy and Security

The CSR Matching Platform collects personal data such as usernames, emails, and assigned roles. Protecting this information is a fundamental ethical responsibility. Passwords are securely hashed using encryption (bcrypt), and role-based access control (RBAC) ensures that only authorized users can view or modify data relevant to their roles.

All sensitive data are handled with minimal collection practices, meaning only essential information is stored. Data is never shared externally or used beyond the intended purpose of the platform. In the case of any security threat, prompt responses and mitigation procedures are in place to minimize harm and maintain transparency with affected users.

2. User Consent and Autonomy

Users retain full control over their data and interactions within the platform. Persons-in-Need can view, edit, or delete their service requests, while CSR Representatives manage their own service lists transparently. Admin activities are logged for accountability and audit purposes.

All data usage aligns with the scope of the platform's objectives. No personal information is used for external analysis or shared with third parties, maintaining informed consent and respect for user autonomy throughout the system.

Conclusion

Ethical awareness guided every phase of our CSR Matching Platform's development. By emphasizing transparency, fairness, accountability, privacy, and safety, our team ensured that both the development process and the final product uphold responsible and trustworthy standards for all users and stakeholders.

Test Plan

Introduction:

This test plan defines the manual testing process for the CSR Platform to ensure all system features work smoothly and align with functional requirements.

Resources:

Testers: Team Member 1, Team Member 2, Roshitha

Test Environment: Local Setup

Preconditions to run test:

Before running the test, ensure the following are installed:

- Node.js (latest LTS)
- npm (bundled with Node.js)
- bcrypt, bcryptjs (latest versions)
- Access to Neon Postgres (database link in .env)

Test Completion Criteria:

Testing will be considered complete when at least 95% of all test cases pass successfully with no major defects. Critical bugs must be fixed and re-tested, while minor bugs should be logged for future resolution. Tests are expected to achieve a minimum of 90% code coverage and meet the defined performance benchmarks.

Test Driven Development

Overview

The project adopts a Test-Driven Development (TDD) approach to ensure that all implemented features meet their intended functionality before integration. This method follows a structured process where test cases are first written to define expected outcomes, followed by code implementation to make those tests pass and refactoring to improve its quality.

The TDD process was applied to User Admin login, logout, create profile and create account.

Tools and Frameworks Used

1. Jest: Primary unit-testing framework for Node.js used for test execution.
2. Supertest: Integrated with Jest to simulate HTTP requests and verify API endpoints such as /login and /logout.
3. Visual Studio Code: Development environment used to run and monitor test results interactively.
4. GitHub: Used for version control.

TDD Process

1. Red (Failing Test) - Jest test cases that expect successful responses.
2. Green (Pass Test) - Implement controller logic to satisfy expected behaviour.
3. Refactoring (Refactor) - Improve quality, structure and maintainability while making tests pass.

Code:

```
1
2 import request from 'supertest';
3 import App from '../app.js';
4 import {
5   LOGOUT,
6   CREATE_PROFILE,
7   CREATE_ACCOUNT,
8   data,
9   loginAs

PASS tests/sprint0.functional.test.js
  Sprint 0 - Functional Tests
    ✓ 1 JA logs in successfully (601 ms)
    ✓ 2 Create User Profile as User Admin (160 ms)
    ✓ 3 Create User Account as User Admin (114 ms)
    ✓ 4 Log Out as User Admin (84 ms)
```

All test cases were executed successfully in Jest, producing “PASS” results for each function tested. This indicates that the implemented features, including login, account creation, profile creation, and logout, performed as intended after refactoring.

Data Driven Development (CSR Matching System)

The CSR Matching System follows a data-driven development approach that leverages machine learning to make smarter and fairer matching decisions between corporate sponsors and persons-in-need. Instead of relying purely on manual inputs, the system collects and analyses real project, donor, and beneficiary data to continuously refine how matches are recommended. Insights from user activity, demographics, and past donation patterns help the model learn which matches lead to the most successful outcomes, ensuring that future decisions are backed by data rather than assumptions.

Machine Learning Model Concept

Model Purpose:

Use machine learning to recommend the most suitable CSR sponsor for a given person-in-need request, based on profile similarity, priority level, and past successful aid patterns.

Model Type:

A supervised learning model as a Decision Tree is employed to predict the likelihood of a successful match. The model is trained using labelled data from previous CSR activities, distinguishing between successful and unsuccessful matches. Each record includes sponsor attributes such as project category, funding capacity, location reach. It also records recipient attributes such as request type, priority, and region.

Inputs (Features):

1. Sponsor's project category
2. Budget size and location coverage
3. Person-in-need's request type, urgency, and location

4. Historical match outcomes

Output (Prediction):

Likelihood score of a successful match between sponsor and recipient.

Machine Learning Process:

1. **Data Collection**

Gather historical CSR data — sponsor profiles, aid requests, project outcomes, and user interactions.

2. **Data Preprocessing**

Clean and standardize all records. Handle missing values, encode categorical data like aid category, and normalize numeric fields.

3. **Feature Engineering**

Identify the most influential attributes like location match, funding amount, category relevance for accurate predictions.

4. **Model Training**

Train the chosen ML model using labelled data such as successful and unsuccessful matches.

5. **Evaluation & Validation**

Use test data to measure performance with accuracy and F1-score metrics. Tune hyperparameters to improve reliability.

6. **Integration into the System**

Implement the trained model into the CSR Matching backend to automatically generate match recommendations in real time.

7. **Continuous Learning**

As new match data is collected, periodically retrain and update the model to improve accuracy and adaptability over time.
